**Abstract.** COLIN GROVES was one of the world's leading anthropologists, primatologists and mammalian taxonomists. This bibliography with 775 entries contains all his publications, including books, chapters in books, scientific and popular articles, book reviews, obituaries and letters or articles in newspapers. There is a list of 62 taxa described by COLIN GROVES and six eponyms.

**Key words.** Taxonomy, bibliography.

### INTRODUCTION

After a long battle with throat cancer, COLIN GROVES passed away in his home in Canberra, Australia on 30 November 2017. Although retired, Colin continued to work in his office at the Australian National University, surrounded by thousands of books and reprints, filing cabinets overflowing with letters and papers, and surrounded by his colleagues. He enjoyed working in this space in the basement which he had occupied since he came to Australia in 1973.

Colin was one of the world's leading anthropologists, primatologists and mammalian taxonomists. Some of his achievements and research interests were highlighted in a *Festschrift* that was presented to him in 2015, with contributions by fellow scientists from across the globe (BEHIE & OXENHAM 2015).

His contributions to his fields of interests were as outstanding as they were varied. He described many (62, see below) new species and subspecies or higher taxa of mammals, he wrote books on mammalian classification and evolution and apes, he was active in the Australian Skeptic consortium, he had interests in cryptozoology, he cared about animal conservation. He was one of the few taxonomists whose knowledge spanned several orders, from bushbabies to kangaroos, from rhinos to duikers. Everybody who has been to a zoo can differentiate a giraffe

from a hippopotamus, but it is rare to find a person who can easily distinguish the skull of an Indian rhinoceros from a Javan one, or even one of the subspecies. Like a wine connoisseur, one often had the feeling that Colin knew exactly on which side of the hill a certain specimen had been collected.

Earlier obituaries (e.g. WIRTH 2017, 2018, ARGUE 2018, BEHIE 2018, GIPPOLITI 2018, GRENVILLE et al. 2018, MEIJAARD 2018, WOOD 2018, WOOD & ANDREWS 2018) have commented on Colin's ability and willingness to share his expertise with others. Most emails with requests about widely varying topics would be answered promptly, usually the same day, and with comments which were always helpful and thought-provoking. He was part of many networks of scientists, of course with many mutual benefits.

Colin wrote books on gorillas, marsupials, ungulates and papers about a wide spectrum of mammals. However, we are happy to say that the rhinoceros ranked high on his list of loved ones. He wrote about them, described one new subspecies (*Dicerorhinus sumatrensis harrissoni*), elevated the Nile rhinoceros from subspecific to specific rank, was for a while a member of the IUCN/SSC African and Asian Rhino Specialists Groups, but moreover filled his house

with hundreds of rhino statues and collected some rhino prints. It is a pity that his recognition of the Nile rhinoceros (*Ceratotherium cottoni*), based on a life-time of universally acclaimed taxonomic research, has become of point of discussion, for reasons which he could not understand as genetic findings by others very nearly matched his own.

The bibliography which follows has 775 entries (Table 1). Colin wrote much, and he wrote well. His scientific output after retirement continued unabated and many of his more searching papers were written in the last years before his sad death. His insights will be missed. His personality will be missed. His understanding of his areas of interest will be missed. Colin GROVES was a scientist of top rank.

#### TAXA DESCRIBED BY COLIN GROVES

Taxa names are in original forms, current names and their association with order and family in parenthesis follow WILSON & REEDER (2005) or ASM Mammal Diversity Database (MDD 2018), when published in or after 2005. Two current names indicate a discrepancy between WILSON & REEDER (2005) and MDD (2018) [\* according to VERON et al. 2015 and DUCKWORTH et al. 2016]. Taxa are arranged according to the taxon name group, chronologically and alphabetically.

## THE BIBLIOGRAPHY

This list of publications is based on a number of versions maintained by Colin himself and found on his computer after his death. This initial list was checked and edited. Online searches provided some additional items. Colin also left a file of newspaper clippings, often letters to

the editors of newspapers based in Canberra, where Colin and Phyllis lived. This bibliography contains all references that could be retrieved, including books, chapters in books, scientific and popular articles, book reviews, obituaries and letters or articles in newspapers signed by Colin GROVES.

The bibliography is arranged chronologically. Within each year, references are given in a set order, starting with books, followed by chapters in books and articles. The latter are arranged by name of journal in alphabetical order. All titles of books and articles are given in full, journal names are not abbreviated. Animal names are given with initial capitals. At the end we have listed some publications “in press” or “in prep.” as far as these could be ascertained. Some citations are incomplete in spite of our effort – we will appreciate if you bring to our notion any missing details or any publications not included.

The authors wish to record their great gratitude to Phyllis GROVES (née DANCE), who has helped us to access Colin’s works at a time when our hearts were filled with grief from the great loss of this remarkable scholar and friend.
