INTRODUCTION

The present survey updates the previous list of the type material kept in the herpetological collection of the National Museum (Nat. Hist.), Prague (Moravec 1996). Currently, the herpetological collection contains type series of 18 nominal taxa associated with different reptile populations from southern and eastern Europe and from the Middle East.

The individual taxa are arranged by order, suborder and family and listed alphabetically by species and subspecies. In the case, that the original description was completed by the same author in additional publications, quotations of these publications are listed chronologically.
