Celtic coins from the oppidum of Hrazany (Příbram district)

The oppidum of Hrazany represents a relatively well known locality from the archaeological point of view. During the archaeological excavations, three Celtic coins were found – they have already been published by K. Castelin (nos. 1, 3 and 6). The following coins were newly discovered in private collections (nos. 2, 4–5, 7–9): the Boian 1/8 stater, obolus (Stradonice type and Stradonice/Karlstein type), south Bavarian quinarius of the propeller type, and possibly, also one quinarius of the Prague type. These coins exclusively belong to the oppidum period (LT D1). Such a small number of coins from the locality reflect the fact, that no professional surface examination using metal detectors has been performed there yet. This is the only way how to get the concrete information about intensity of the monetary circulation there, about local coin production and long distance contacts from the numismatic point of view.

 *the Boians; Celtic coins; 1/8 stater; obolus; quinarius; Hrazany (Příbram district).*

 *Bojovčė; keltské mince; 1/8státeru; obol; kvínár; Hrazany (okr. Příbram).*
