#### **Abstract**

Minerals published during the period 2000 to 2005 from the area of Slovak Republic are described in this paper. The descriptions of 188 mineral species including 4 elements, 59 sulphides and sulphosalts, 2 halides, 34 oxides and hydroxides, 10 carbonates, 11 sulphates, 18 phosphates including arsenates, vanadates and 50 silicates are given. Most of them were identified by electron microprobe and X-ray powder diffraction data.

**Key words:** *topographic mineralogy, minerals, occurrences, Slovak Republic*
