Abstract. We present an annotated catalogue for the tribe Incini (Coleoptera: Scarabaeidae: Cetoniinae) including references to all taxonomic and nomenclatural acts, clarifying the spelling of names, providing type depositories and occurrence records for the species. The spelling of *Golinca davisii* (Waterhouse, 1877) is fixed, and the incorrect subsequent spelling *Pantodinus klugi* Burmeister, 1847 is preserved. A comprehensive list of all valid names in Incini is provided. Furthermore, we describe the third species in the genus *Archedinus* Morón & Krikken, 1990, and first one known from outside of Mexico, *A. antoshkai* Seidel & Arriaga-Varela sp. nov. from Cerro las Minas, the highest mountain in Honduras. We provide an updated determination key for the species of *Archedinus*. The new species is compared with *Archedinus howdeni* Morón & Vaz-de-Mello, 2007, the most similar species in terms of genital and habitus morphology. An updated key to identification of males of *Archedinus* is provided.

Key words. Coleoptera, Scarabaeidae, Cetoniinae, *Coelocratus*, *Inca*, *Golinca*, *Pantodinus*, flower chafer, faunistics, gender, nomenclature, spelling, types, taxonomy, year of description, Neotropical Region

Introduction

Incini is a Neotropical tribe of flower chafers (Coleoptera: Scarabaeidae: Cetoniinae). Previously, this group of beetles has been treated as a subtribe Incaina in the subfamily Trichiinae (e.g., MORÓN & KRIKKEN 1990; MORÓN & VAZ-DE-MELLO 2007; SMITH 2006). SMITH et al. (2006) indicated the need for elevation of the subtribe to tribal level, since the historical concept of the tribe Trichiini was paraphyletic based on their preliminary molecular data. Agreeing with that, more recent works treat this group as a tribe in the subfamily Cetoniinae based on morphological and molecular phylogenetic analyses (e.g., MICÓ et al. 2008, ŠÍPEK et al. 2016). BOUCHARD et al. (2011) corrected the stem and spelling of the family group name to *Inc-* and *Incini*.

The taxonomic history of the species and genera in the tribe is complex. The spelling of species names, authors and year of publication of species have been cited differently by cataloguers, taxonomists, and ecologists. The lack of a complete and comprehensive work dealing with the nomenclature in this tribe is an obstacle for taxonomists aiming to continue research on Incini.

Five Incini genera have been reported from Mexico to Argentina (Fig. 6): *Archedinus* Morón & Krikken, 1990 (Figs 1–3, 5A–B), *Coelocratus* Burmeister, 1842 (Figs 5C–D), *Inca* LePeletier & Serville, 1828 (Figs 5E–G), *Golinca* Thomson, 1878 (Figs 5H–J) and *Pantodinus* Burmeister, 1847 (Figs 5K–M).

The genus *Archedinus* was described by MORÓN & KRIKKEN (1990) in order to include a single species, *A. relictus*

Morón & Krikken, 1990 from Chiapas, Mexico. *Archedinus* is currently classified within the tribe Incini, close to *Pantodinus* as a “relictual” representative with reduced sexual dimorphism. Males and females of *A. relicitus* were described based on nine specimens collected in the cloud forest of El Triunfo in the Sierra Madre de Chiapas mountain range. Later, MORÓN & VAZ-DE-MELLO (2007) described a second species, *A. howdeni* from Chimalapas region in Oaxaca, Mexico based on four male specimens and expanded the generic definition of *Archedinus*. The position of *Archedinus* within the other Incini was tested based on a morphological phylogenetic analysis, where it was sister taxon of *Pantodinus* and, along this one, sister to the remaining Incini. Not much is known about the life history of the genus. *Archedinus relicitus* was reported having “diurnal activity, living under forest litter and rotten logs in montane humid forests located at elevations going from 1000 to 1850m” (MORÓN & KRIKKEN 1990). *Archedinus howdeni* was found in “tropical subdeciduous forest at 1600 m” (MORÓN & VAZ-DE-MELLO 2007). Besides these two type localities in Mexico, no other faunistic records have been published. Therefore, the distribution range of *Archedinus* is very poorly known.

In the present contribution we describe a third species recently collected in Honduras, showing that the genus is not solely endemic to Mexico and has a much larger distribution range than previously known. We update the generic diagnosis and the determination key based on the work of MORÓN & VAZ-DE-MELLO (2007).

In addition, we present an annotated catalogue of the Incini aiming to resolve all the nomenclatural problems in the tribe.

Material and methods

Collections. The material cited is deposited in the following collections:

ADPC	Alain Drumont Personal Collection, Brussels, Belgium;
AKPC	Anton Kozlov Personal Collection, Moscow, Russia;
ARPC	Andreas Reichenbach Personal Collection, Leipzig, Germany;
BCRC	Brett Ratcliffe Personal Collection, Lincoln, Nebraska, USA;
BMNH	Natural History Museum, London, United Kingdom (Max Barclay, Michael Geiser);
CEMT	Setor de Entomologia da Coleção Zoológica, Universidade Federal do Mato Grosso, Cuiabá, Brazil (Fernando Vaz-de-Mello);
CMNC	Canadian Museum of Nature Collection, Ottawa, Canada (Robert Anderson, François Génier);

USNM United States National Museum, Washington, District of Columbia, USA (currently housed at the University of Nebraska State Museum for off-site enhancement) (Brett Ratcliffe);
UUZM Evolutionsmuseet, Uppsala University, Uppsala, Sweden (Hans Mejlon);
ZMHB Museum für Naturkunde Leibniz-Institut für Evolutions- und Biodiversitätsforschung, Berlin, Germany (Johannes Frisch, Joachim Willers);
ZMUH Zoologisches Museum, Centrum für Naturkunde, Hamburg, Germany (Martin Husemann).

Measurements. Total body length and width were measured using an electronic caliper, and measurements of other structures were obtained by using an ocular micrometer attached to an Olympus (SZX 16) dissecting microscope.

Illustrations. Habitus photographs of the new species were taken using a Canon EOS 550D digital camera with a Canon MP-E65mm f/2.8 1–5× macro lens. Photographs of all other species were provided by curators of different institutions (see Acknowledgements). Line drawings were made by hand. All morphological illustrations were subsequently edited in Adobe Photoshop CS5. Pictures of the habitat in the type locality of *A. antoshkai* were provided by Viktor Sinyav.

Annotated catalogue. The style for the entries for species in the catalog follows MOORE et al. (2017) and provide: 1) the valid species name, author and date, 2) original spelling and combination, misspellings, new combinations, and invalid names, 3) synonyms and the reference in which the synonym was designated, 4) general distribution data including the country (in capital letters) and states/provinces/departments when they are known. Distributions are based on the literature and on specimens that we examined.

Results

Archedinus Morón & Krikken, 1990

Type species. *Archedinus relictus* Morón & Krikken, 1990: 76.

Diagnosis. This genus is distinguished from other members of the tribe Incini by the following combination of characters: body length 17–27 mm, dorsal integument shiny, dark-brown to black; clypeal anterior margin sinuate, male with short clypeal horn or elevated clypeal margin lacking lateral or medial clypeal horns (present in *Golinca*, *Inca* and *Pantodinus*); eyes with strong supraocular ridges; male with antennal club longer than pedicel and funicle together, mentum with anterior margin sinuate or rounded; pronotum coarsely punctate, without posterior impression; anterior prosternal process projected, longer than procoxal length, elytra deeply striae without waxy surface; pterothoracic setae sparse; profemur with a pre-apical projection; protibia with 3 external teeth; meso- and metatibiae expanded, tridentate; aedeagus with parameres simple or bifurcate.

Archedinus is most similar to *Pantodinus* due to the sinuate antero-ventral clypeal margin and the well marked elytral striae. However, *Archedinus* can be distinguished by the strong supraocular ridges, the prosternal process being

longer than the procoxal anterior face, and by the sparse setae on the pterosterna (MORÓN & VAZ DE MELLO 2007).

The third stage larva of *A. relictus* was diagnosed from other Incini (MORÓN 1995) by having mandibles without a stridulatory area; premolar area on left mandible with 2 teeth; dorsoepicranial setae absent; maxillary stridulatory area with 12 irregular, non-pointed teeth; last antennomere with 7–13 dorsal sensory spots; tarsal claws with 2 internal preapical setae; spiracle respiratory plates with irregular, ameboid “holes”; dorsal and ventral abdominal sclerites with long setae.

Archedinus antoshkai

Seidel & Arriaga-Varela, sp. nov.

(Figs 1A; 2A,C,E; 3A–B,D,F)

Type material. HOLOTYPE: ♂ (NMPC), label data: “HONDURAS: Lempira / Department, P.N. Celaque Cerro / Las Minas / 14°32'50”N, 88°40'11”W / 01-04.vii.2014, 2600m / V. Sinyaev & M. Márquez lgt. // ex. Matthias Seidel / Collection // *Archedinus* n. sp. / det. M. Seidel 2016 // HOLOTYPE / *Archedinus antoshkai* / sp. nov. / M. Seidel & E. Arriaga-Varela / des. 2017”.

Description. Male (holotype). Total length: 17.5 mm, humeral width: 7.5 mm, maximum width: 8.5 mm (Figs 1A–B). **Color.** Ventrally and dorsally shiny black, surface in punctures dull. **Head.** Surface coarsely and irregularly

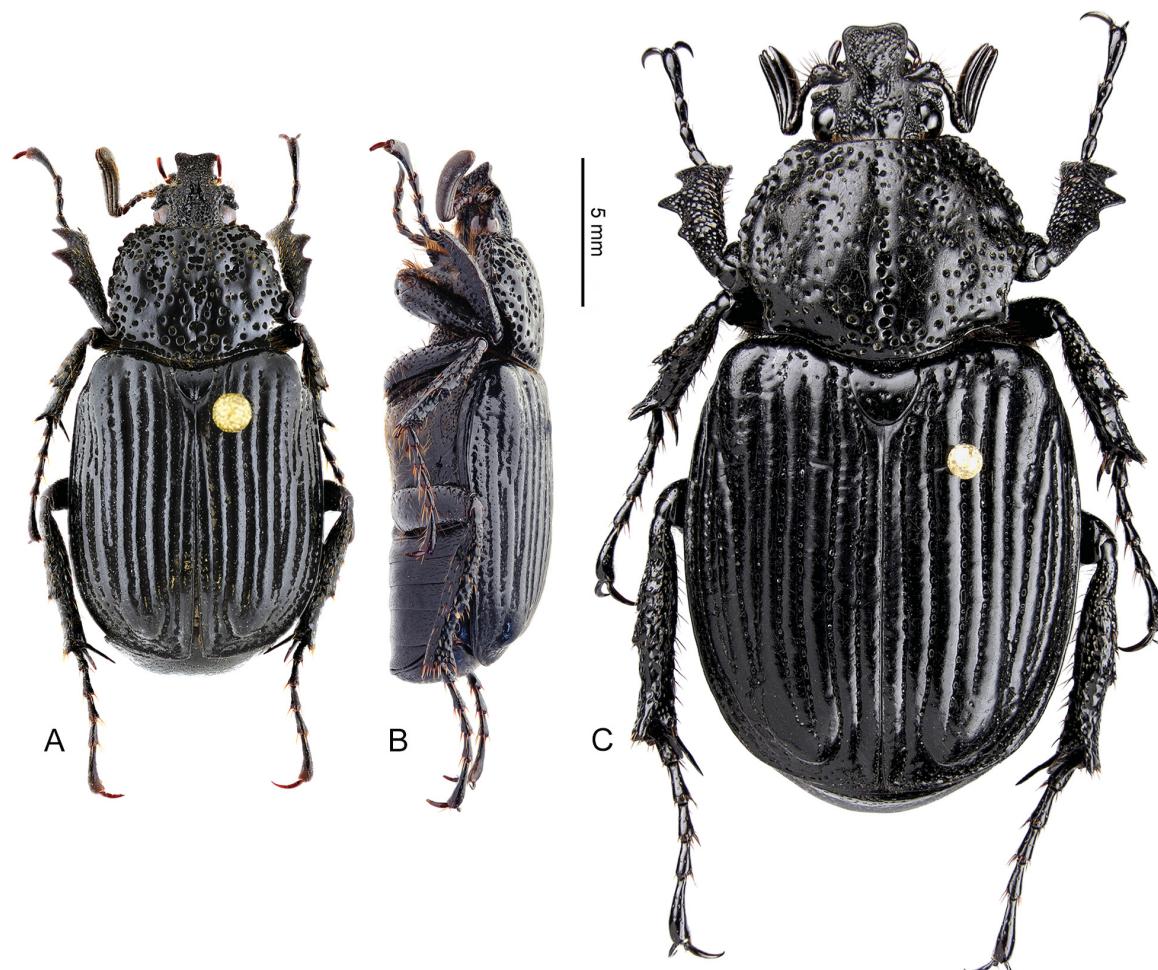

Fig. 1. Habitus views of *Archedinus* spp. A–B – *A. antoshkai* sp. nov., C – *A. howdeni* Morón & Vaz-de-Mello, 2007. A, C – dorsal habitus. B – lateral habitus. Image 1C by courtesy of François Génier.

punctate (Fig. 2A), with punctures ranging in diameter from 27.5–87.5 µm. With a deep, long, triangular excavation, of irregular triangular shape narrowing down from frons to clypeus to a third of its width. Clypeus covered by short, tawny setae, abruptly constricted at base to 0.7 times of apical width, anterior clypeal margins sinuate with anterolateral corners reflexed. Maximum width of head capsule 3.1 mm; maximum width of clypeus 1.5 mm. Interocular distance equals 3.1 maximum transverse eye diameters.

Labium elongate, narrowing anteriorly with anterior margin slightly rounded (Fig. 3D), deeply punctate, seti-

gerous; setae long, tawny. Distal maxillary palpomere 0.8 mm in length, subcylindrical, weakly curved, apex truncate. Third palpomere subfusiform, rounded, not connate with second, enlarged, 0.6 mm long. Antennae with 10 antennomeres, antennal club composed of three enlarged, lamellate antennomeres, club 2.6 mm long, 1.7 times longer than preceding six antennomeres combined; antennomere 7 wider than long, with narrowed, short anterior projection; antennomere 6 longer than wide, with apex obliquely truncate, without anterior projection; antennomere 3 as long as antennomere 4 or 5, antennomere 3 as long as wide, pedicel nearly globular, as wide as long; scape elongate-pyriform.

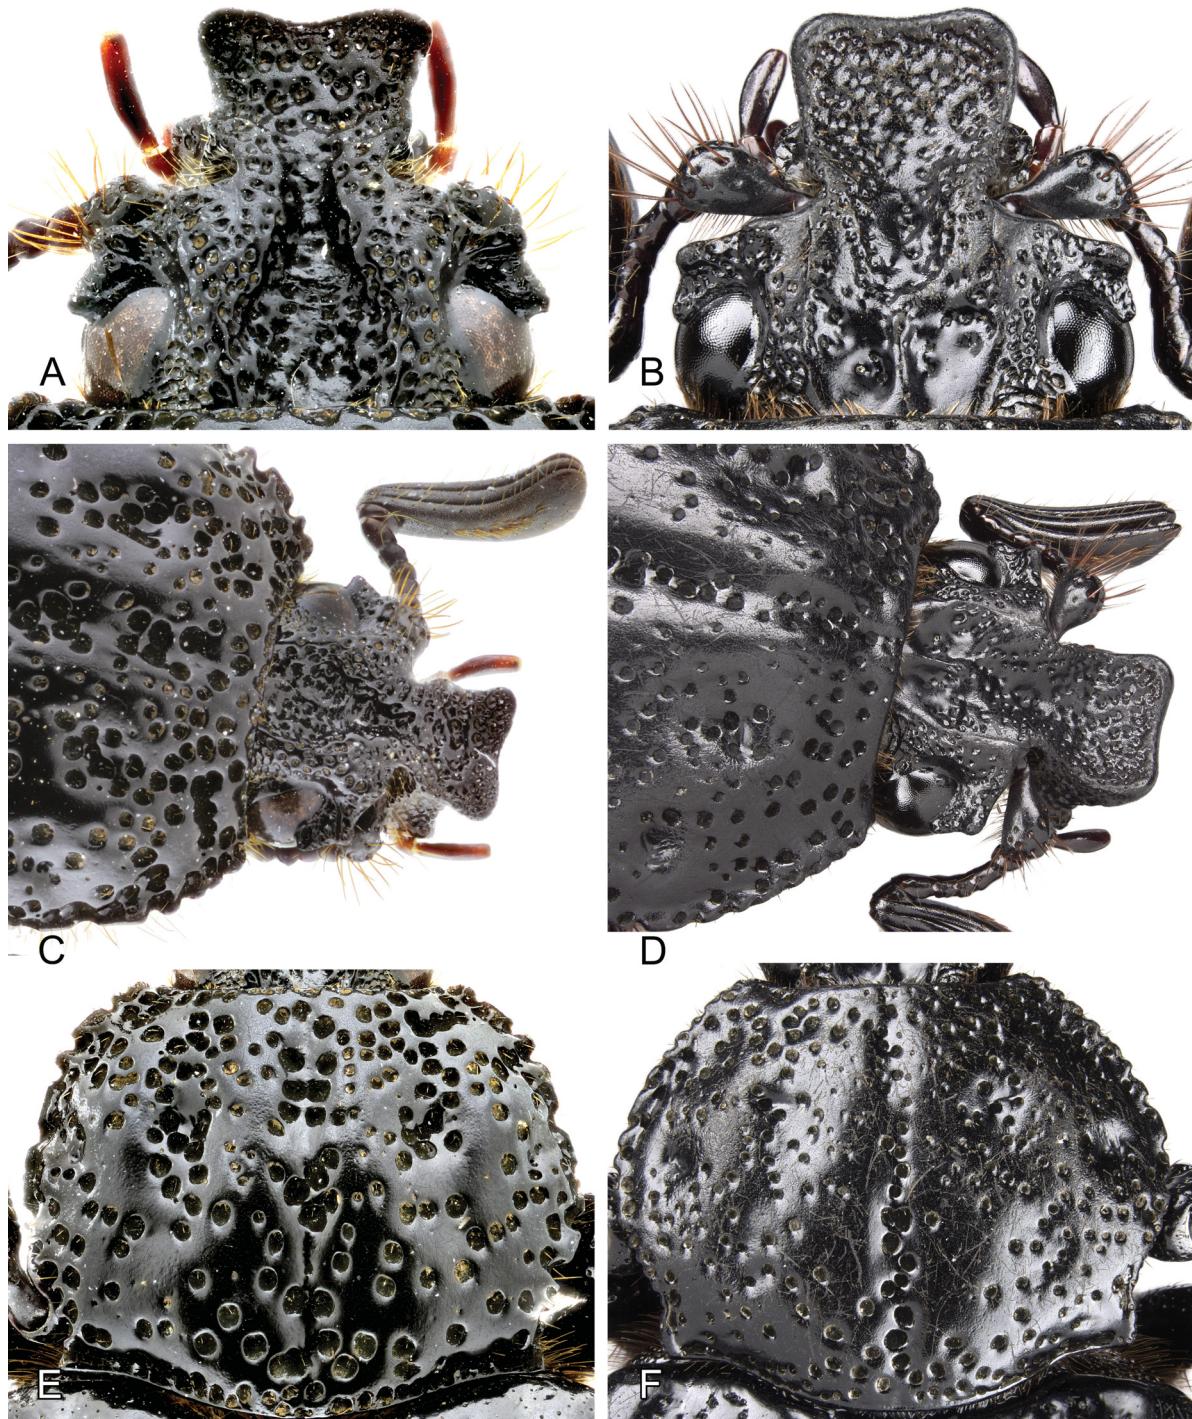

Fig. 2. Details of *Archedinus* spp. A, C, E – *A. antoshkai* sp. nov. B, D, F – *A. howdeni* Morón & Vaz-de-Mello 2007. A–B – head dorsal view. C–D – head antero-lateral view. E–F – pronotum dorsal view. Images 2B,D,F courtesy of François Génier.

Prothorax. Pronotum about 1.3 times wider than long; 1.5 times wider at posterior angles than at anterior angles, margins rounded, slightly more strongly convergent to posterior angles (Figs 2C,E). Dorsal surface coarsely and irregularly punctate, punctures more dense in anterior half, punctures deep, ranging from 37–325 µm in diameter. Disc with a longitudinal depression on midline, and 2 depressions on each side, 1 large, elongate at anterior half, vanishing towards antero-lateral corners, and a small, shallower one at posterior 3/4, depressions with punctures wider and confluent. Prosternum smooth on sides, with long prosternal process, acute, with briefly rounded apex, and many long, tawny setae projected anteriad.

Elytra with margins curved in anterior fifth, then subparallel to rounded apical fourth; with 10 wide, deep striae, each with irregular row of rounded to elongate ellipsoid, foveate punctures; striae I–V extend from anterior border to apical callus; striae VI–IX extend from humerus to apical umbone; stria X extends along lateral margin but does not reach apex; interstriae shiny, with fine punctures and sparser, larger, foveate punctures; epipleura continuously narrowing posteriorly to just before apex. **Mesothorax.** Mesoventrite coarsely punctate, depressed at center, abruptly upturned near anterior borders of mesocoxae. Wings well developed. Metaventrite convex at sides, moderately depressed around discrimen; coarsely punctate towards anterolateral corners

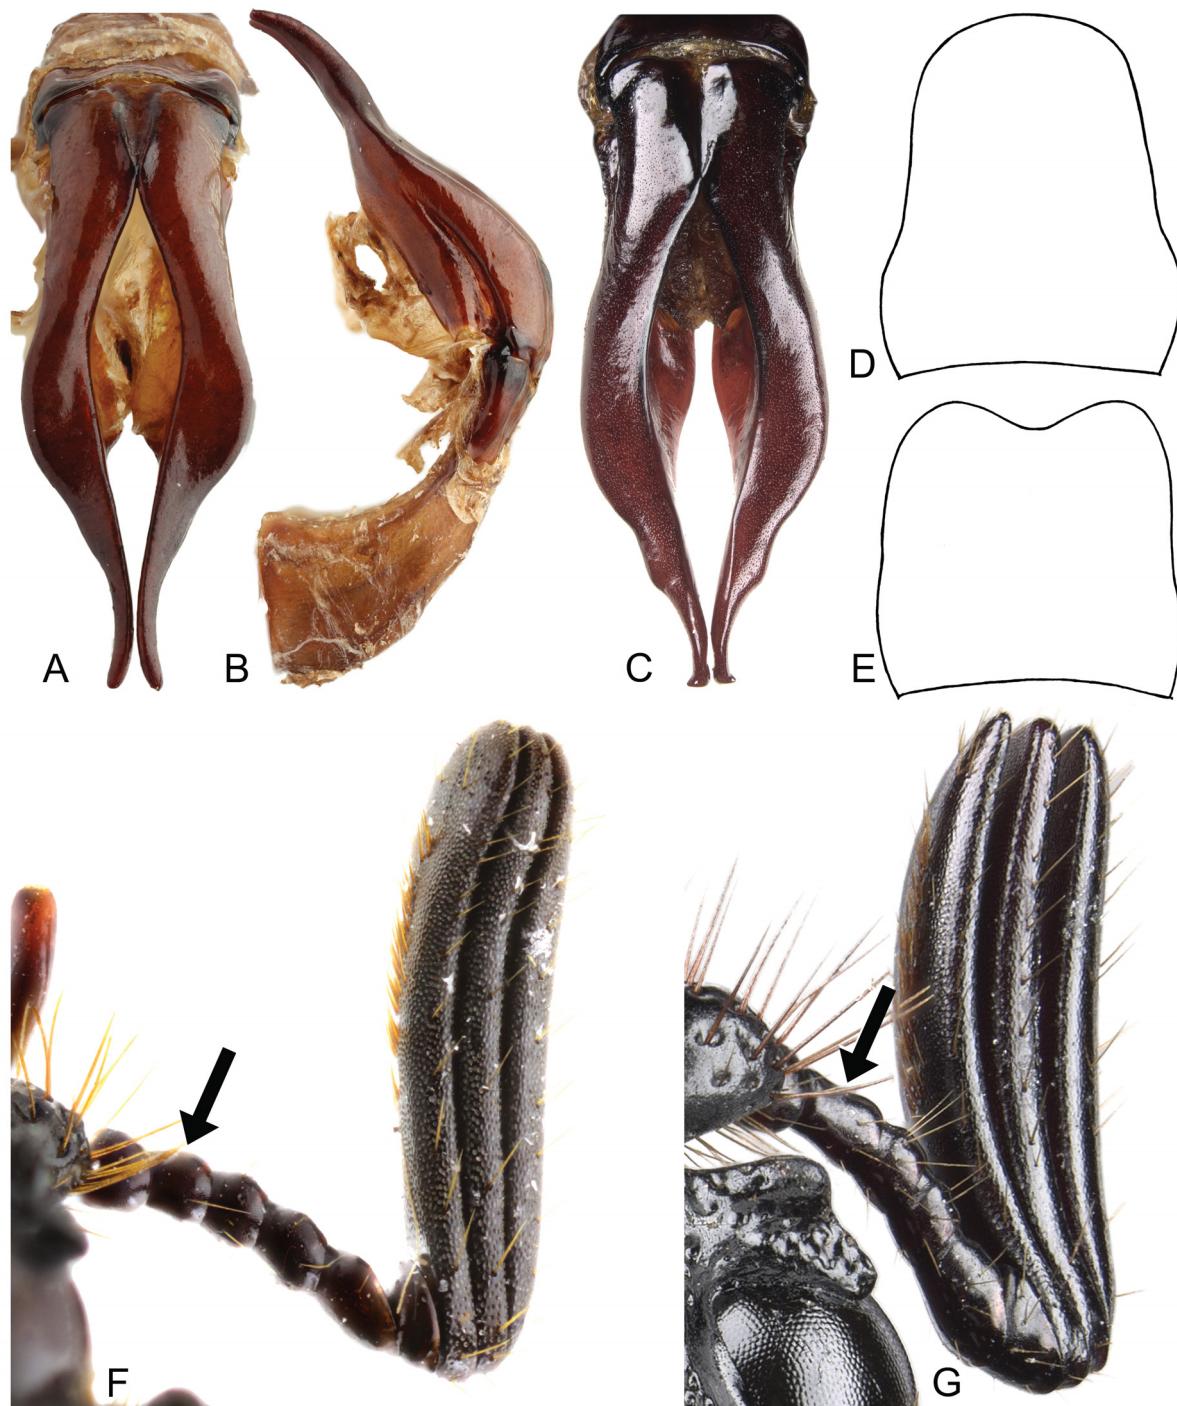

Fig. 3. Details of *Archedinus* spp. A, B, D, F – *A. antoshkai* sp. nov. C, E, G – *A. howdeni* Morón & Vaz-de-Mello 2007. A – aedeagus dorsal view. B – aedeagus lateral view. D–E – outline of mentum. F–G – antennae with arrow indicating third antennomere. Images 3C,G by courtesy of François Génier.

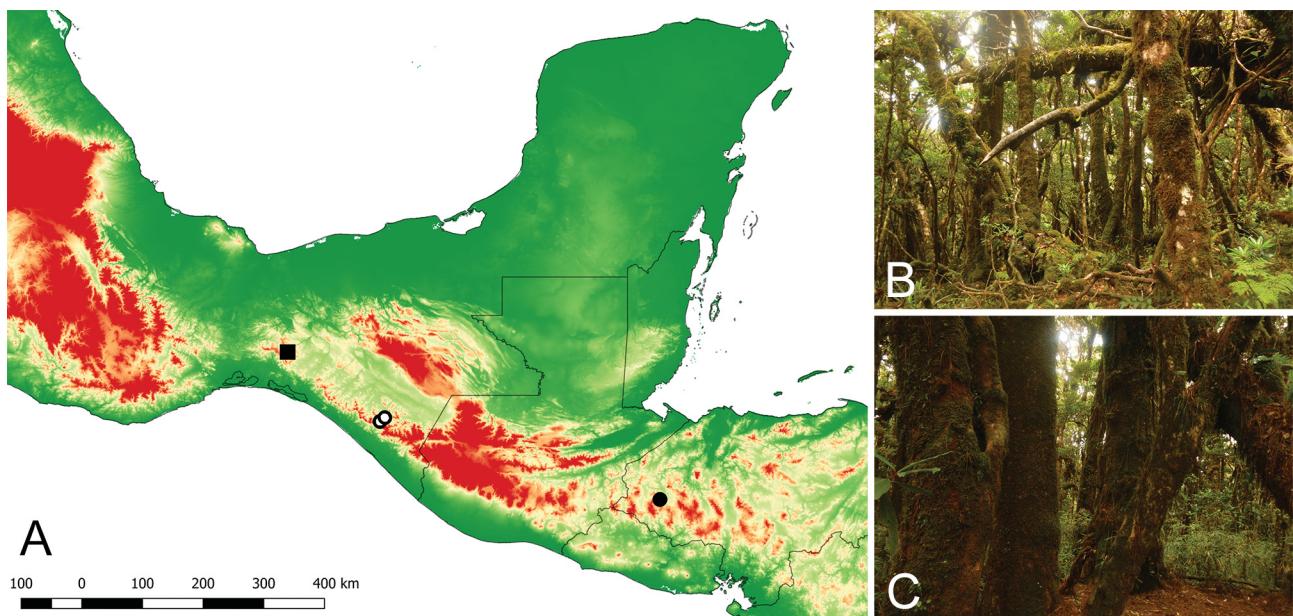

Fig. 4. Distribution and habitat *Archedinus* species. A – distribution map: black square – *A. relicitus* Morón & Krikken, 1990; white circle – *A. howdeni* Morón & Vaz-de-Mello, 2007; black circle – *A. antoshkai* sp. nov. B–C – type locality of *A. antoshkai* sp. nov. in Celaque National Park at 2600 m. Images 4B–C by courtesy of Viktor Sinyaev.

with many slender, decumbent to erect setae. *Legs*. Profemur with a preapical, blade-like, dorsal projection, with rounded apex. Protibia with a wide inner basal notch. All tarsi robust, with large, sickle-shaped claws.

Abdomen. Ventrites convex, almost glabrous, with sparse, small decumbent setae, finely punctate, punctures narrowly transverse; last ventrite with deeper, more rounded punctures on posterior margin which is slightly raised and briefly emarginate at middle. Pygidium glabrous, shiny, with dense, fine micropunctures mixed with sparse, large, sometimes confluent, round punctures, finely rugose toward basal angles; without waxy spots; posterior margin nearly rounded. *Genitalia*. Aedeagus with large basal piece, slightly convex; tectum shallowly concave; parameres elongate, sinuous in lateral view, with apical third bifurcate in apical third in dorsal view, apex rounded (Figs 3A–B).

Female. Unknown.

Differential diagnosis. *Archedinus antoshkai* is most similar to *A. howdeni* based on the emarginate clypeal projection, anterior prosternal process with rounded apex, and the apices of the parameres not being bifurcate. However, it can be distinguished from it by its smaller size (17.5 mm in *A. antoshkai* versus 25–27 mm in *A. howdeni*), the clypeal projection with anterior margin more strongly emarginate medially (Fig. 2A in *A. antoshkai* versus Fig. 2B,D in *A. howdeni*), in *A. howdeni* the frons is with an elongate, triangular depression (Figs 2A,C in *A. antoshkai* versus Fig. 2B in *A. howdeni*), the third antennomere is small, being as long as the fourth (Fig. 3F in *A. antoshkai* versus Fig. 3G in *A. howdeni*), the mentum is elongate with a rounded anterior margin (Fig. 3D in *A. antoshkai* versus Fig. 3E in *A. howdeni*), pronotum with coarser lateral margins (Figs 2C,E in *A. antoshkai* versus Figs 2D,F in *A. howdeni*) and the aedeagus with apices of the parameres simple, without a small lateral projection (Fig. 3A in *A. antoshkai* versus Fig. 3C in *A. howdeni*).

Etymology. The new species is named after Anton Olegovich Kozlov (Moscow, Russia), who made the specimen available for study and generously donated the holotype to us. The name refers to the diminutive form of his first name, “Antoshka”, used by friends; noun in apposition.

Natural history. The species occurs in the highest mountain in Honduras in a tropical cloud forest at 2600 m elevation. Female specimens, immature stages, and life cycle are unknown.

Distribution. Only known from the type locality: Cerro Las Minas in Celaque National Park, Lempira Department, Honduras.

Key to the males of *Archedinus* (modified from MORÓN & VAZ-DE-MELLO 2007)

- 1 Apex of prosternal process acute. Profemur with an acute preapical tooth. Elytral striae with waxy gray secretion. Male clypeus with short, bifurcate horn. Apex of parameres bifurcate. *A. relicitus* Morón & Krikken, 1990
- Apex of prosternal process rounded. Profemur with a rounded preapical tooth. Striae without waxy secretion. Male clypeus with elevated anterior margin briefly sinuate. Apex of parameres acute. 2
- 2 Antennomere 3 as long as antennomeres 4 and 5 combined. Mentum short and anteriorly sinuate. Apex of parameres with small, lateral projection. Total length 25–27 mm. *A. howdeni* Morón & Vaz-de-Mello, 2007
- Antennomere 3 half as long as antennomeres 4 and 5 combined. Mentum elongate and anteriorly rounded. Apex of parameres simply rounded. Total length ca. 17.5 mm. *A. antoshkai* Seidel & Arriaga-Varela sp. nov.

Catalogue of the tribe Incini

Tribe Incini Burmeister, 1842

Incadae Burmeister, 1842: 704 [original spelling]

Type genus. *Inca* LePeletier & Serville, 1828.

Remarks. BOUCHARD et al. (2011) corrected the stem of the family group name from *Inca*- to *Inc-*, lacking an explanation for their action. As discussed below under the section *Inca*, *Inca* is a masculine genus name derived from Spanish. While creating family-group names BURMEISTER (e.g., 1842, 1844) removed a few final letters from every genus name independently from their gender and added suffixes such as -idae, -idae or -adae (e.g., Lomapteridae Burmeister, 1842 [from *Lomaptera* Gory & Percheron, 1833]; Macraspididae Burmeister, 1844 [from *Macraspis* MacLeay, 1819]; Lichniidae Burmeister, 1844 [from *Lichnia* Erichson, 1835]). Therefore, it can be securely assumed that the correct stem of *Incadae* Burmeister, 1842 is *Inc-* and Article 29.3.3. (ICZN 1999) is followed: “If a generic name is or ends in a word not Greek or Latin, or is an arbitrary combination of letters, the stem for the purposes of the Code is that adopted by the author who establishes the new family-group taxon, either the entire generic name (see Article 29.6), or the entire generic name with the ending elided, or the entire generic name with one or more appropriate linking letters incorporated in order to form a more euphonious family-group name”.

Genus *Archedinus* Morón & Krikken, 1990

Archedinus Morón & Krikken, 1990: 74 [original description]

Type species. *Archedinus relictus* Morón & Krikken, 1990 [by original designation].

Gender. Masculine.

Species included. 3 species.

Distribution. The genus is found in Mexico and Honduras, likely occurring in Guatemala as well.

Archedinus antoshkai Seidel & Arriaga-Varela sp. nov.

(Figs 1A; 2A,C,E; 3A–B,D,F)

Archedinus antoshkai Seidel & Arriaga-Varela sp. nov. (this paper).

Locality records. HONDURAS: LEMPIRA (this paper).

Types. Holotype ♂ in NMPC (Figs 1A; 2A,C,E; 3A–B,D,F).

Archedinus howdeni Morón & Vaz-de-Mello, 2007

(Figs 1B; 2B,D,F; 3C,G)

Archedinus howdeni Morón & Vaz-de-Mello, 2007: 111 [original combination]

Locality records from literature. MEXICO: OAXACA (MORÓN & VAZ-DE-MELLO 2007).

Types. Holotype ♂ and 1 paratype ♂ in MXAL/IEXA, 1 paratype ♂ in CMNC (Figs 1B; 2B,D,F; 3C,G), 1 paratype ♂ in CEMT (MORÓN & VAZ-DE-MELLO 2007).

Archedinus relictus Morón & Krikken, 1990

(Figs 5A–B)

Archedinus relictus Morón & Krikken, 1990: 74 [original combination]

Locality records from literature. MEXICO: CHIAPAS (MORÓN & KRIKKEN 1990).

Types. Holotype ♂, allotype ♀ and 2 paratypes (1 ♂ 1 ♀) in MXAL,

3 paratypes (2 ♂♂ 1 ♀) in SMF (Figs 5A–B), 2 paratypes (1 ♂ 1 ♀) in RMNH (MORÓN & KRIKKEN 1990).

Genus *Coelocratus* Burmeister, 1842

Coelocratus Burmeister, 1842: 767 [original description]

Coleocratus: MORÓN & VAZ-DE-MELLO (2007): 118 [incorrect subsequent spelling]

Type species. *Inca rufipennis* Gory & Percheron, 1833 [by monotypy].

Gender. Masculine.

Species included. 1 species.

Remarks. BLACKWELDER (1944) and KRAJCIK (1999, 2012) erroneously listed 1841 instead of 1842 as the year of description of the genus. RICCHIARDI (2002) transferred the genus from Trichiini to Incini.

Distribution. According to GORY & PERCHERON (1833), *Coelocratus rufipennis* is from Brazil, but they did not provide a more detailed locality, and BURMEISTER (1842) restricted it to northern Brazil. Actual specimens in the Burmeister collection (MLUH) are labelled as being from Cayenne (French Guiana) (Fig. 6).

Coelocratus rufipennis (Gory & Percheron, 1833)

(Figs 5 C–D)

Inca rufipennis Gory & Percheron, 1833: 109 [original combination]

Ynca rufipennis: LAPORTE (1840): 159 [combination with misspelled genus name]

Coelocratus rufipennis: BURMEISTER (1842): 768 [new combination]

Types. Lectotype ♂ in MNHG (Figs 5C–D) (designated by RICCHIARDI 2002: 4), 1 paralectotype ♂ in MACN (invalid lectotype designation by DI IORIO 2013: 82).

Locality records from literature. BRAZIL (GORY & PERCHERON 1833, BURMEISTER 1842).

Additional material examined. FRENCH GUIANA: CAYENNE: 1 ♂ 1 ♀ (MLUH): Cayenne.

Remarks. As noted by MACLEAY (1838) the author of the species is GORY & PERCHERON (1833) and not Dupont as stated in GORY & PERCHERON (1833). DI IORIO (2013) overlooked the lectotype designation by RICCHIARDI (2002) and designated a lectotype in the Burmeister collection housed in the MACN. RICCHIARDI (2002) validly designated the lectotype based on one syntype of *Inca rufipennis* housed in the MNHG collection. The syntype sent by Gory & Percheron to Burmeister in Argentina therefore has to be regarded as a paralectotype.

Genus *Golinca* Thomson, 1878

Golinca Thomson, 1878: 31 [original description]

Type species. *Cetonia bifrons* Olivier, 1789: 82 [by original designation].

Gender. Masculine.

Species included. 4 species.

Remarks. When describing *Golinca*, THOMSON (1878) did not state the gender of the genus name and as such it has not been subsequently established with the combination of specific epithets. We assume that Thomson derived *Golinca* from the generic names *Goliathus* and *Inca*, two genera of which Incini species were previously combined with. Therefore, the gender of the genus should be regarded as masculine, like in *Inca* (see above).

Distribution. The genus is found in Bolivia, Brazil, Colombia, Costa Rica (SOLÍS 2007), Ecuador, French Guiana, and Peru (Fig. 6).

Examined material not identified to species. **BOLIVIA:** SANTA CRUZ: 1 ♂ (PDPC): Bolivia, Sara province, J. Steinbach leg. **BRAZIL:** AMAZONAS: 3 ♀♀ (ZMUH): Brazil, Manaus, Rio Negro; 3 ♀♀ (ZMUH): Brazil, Uypiranga, Amazonas; 1 ♀ (MZSP) Brazil, Amazonas, Manaus, Rio Negro, vi.1921, J. F. Zikán leg., 1 ♀ (MZSP): Brazil, Amazonas, Manaus, Reserva Ducke, viii.1965, V. C. Remarks. OTAVO et al. (2013) erroneously listed the year of publication for this species as Olivier, 1758.

Golinca davisii (Waterhouse, 1877)

Inca davisii Waterhouse, 1877: 228 [original combination]
Golinca davisii: SCHENKLING (1922): 5 [new combination and incorrect subsequent spelling]

Locality records from literature. **PERU** (WATERHOUSE 1877).

Additional material examined. **BOLIVIA:** SANTA CRUZ: 1 ♂ 1 ♀ (CMNC): Bolivia, Santa Cruz, Ichilo, Steinbach leg.; 1 ♀ (CMNC):

Bolivia, Santa Cruz, Ichilo, Buenavista, ii.1950, Martínez leg.; 1 ♀ (CMNC): Bolivia, Santa Cruz, Ichilo, Buenavista, iii.1955, Martínez leg.

ECUADOR: EL ORO: 1 ♀ (MNCN): St. Rosa (Ecuador), 24.v.–5.vi.1865, F. Martínez, Expedición al Pacífico (1862–1865). **MORONA SANTIAGO:** 1 ♀ (NMPC): Ecuador, Macas, Normandie, 1500 m.

Types. Female holotype in BMNH.

Remarks. SCHENKLING (1922), while transferring *Inca davisii* Waterhouse, 1877 to the genus *Golinca*, misspelled the specific epithet as “*davisii*” lacking one “*i*”. This incorrect subsequent spelling has since been used by several authors (BERGÉ 1884, BLACKWELDER 1944, KRAJCIK 1999, MORÓN & VAZ-DE-MELLO 2007, VALOIS & SILVA 2015). Nevertheless, the correct spelling, *G. davisii*, remained in use (NAGAI 1994, RATCLIFFE et al. 2015, DE SOUZA SILVA et al. 2017). We follow Art. 33.3 (ICZN 1999) which states that “any subsequent spelling of a name different from the correct original spelling, other than a mandatory change or an emendation, is an “incorrect subsequent spelling”; it is not an available name”. Since both the correct and incorrect subsequent spellings were recently in use, the incorrect subsequent spelling is not in prevailing usage and cannot be preserved under Art. 33.3. The name to be used is *Golinca davisii* (Waterhouse, 1877).

Golinca ishiharai Nagai, 1994

Golinca ishiharai Nagai, 1994: 243 [original combination]

Types. Holotype ♂ in MNHY, 1 paratype ♂ in TMPC, 1 paratype ♂ in KSPC (NAGAI 1994).

Locality records from literature. **PERU:** SATIPO (NAGAI 1994).

Remarks. The holotype of *G. ishiharai* was not found in the MNHY and possibly could have been destroyed by a fire that consumed Shinji Nagai’s personal collection (pers. comm. by Kyohei Watanabe, 2018).

Golinca trevisani Valois & Silva, 2015

Golinca trevisani Valois & Silva, 2015: 193 [original combination]

Types. Holotype ♂ in MPEG, 1 paratype ♂ in BCRC (VALOIS & SILVA 2015).

Locality records from literature. **BRAZIL:** RONDÔNIA (VALOIS & SILVA 2015), AMAZONAS (VALOIS & SILVA 2015).

Genus *Inca* LePeletier & Serville, 1828

Inca LePeletier & Serville, 1828: 380 [original description]

Ynca Chevrolat, 1833: unpaginated [unjustified emendation]

Type species. *Cetonia ynca* Weber, 1801 [subsequent designation by HOWDEN (1968: 12)]

Gender. Masculine.

Remarks. The authorship and date of publication of the name *Inca* has been the subject of confusion. BLACKWELDER (1944), MORÓN et al. (1997), KRAJCIK (1999) and RESTREPO-GIRALDO et al. (2003) erroneously attributed the authorship of *Inca* to “Serville (1825)”. BOUSQUET (2016) showed that the second *livraison* of the “*Encyclopédie méthodique*” containing pages 345 to 832 was published in December 1828. The authors of *Inca* are LEPELETTIER & SERVILLE (1828) as stated on page 346 in the second *livraison*. KRAJCIK (1999) erroneously listed *Ynca* as a synonym to *Inca* and attributed authorship to GORY & PERCHERON

(1833). However, the name *Ynca* was introduced by CHEVROLAT (1833) as an unjustified emendation and later used by LAPORTE (1840).

LEPELETIER & SERVILLE (1828) did not explain the origin and gender of the genus name. Furthermore, the specific epithets associated with the genus in the original description are either gender neutral or can be either masculine or feminine. Since, LEPELETIER & SERVILLE (1828) changed the specific epithet “*barbicorne*” (neutral) to “*barbicornis*” (masculine and feminine), it is clear that they deemed the gender of the genus not to be neutral. The genus name *Inca* is derived from the Spanish noun “Inca” (masculine). According to the Diccionario de la Lengua Española (REAL ACADEMIA ESPAÑOLA 2014) the masculine noun “Inca” has three meanings: 1) sovereign who ruled the Inca Empire; 2) descendant of the Inca; 3) old gold coin of Peru. We follow Art. 30.2.1. (ICZN 1999), which states: “If a name reproduces exactly a noun having a gender in a modern European language (without having to be transliterated from a non-Latin alphabet into the Latin alphabet) it takes the gender of that noun.” Since these conditions are met in this case, the gender of the genus *Inca* is masculine. Furthermore, BURMEISTER (1842) considered the genus name to be masculine and therefore adapted previously feminine species epithets into the masculine form. The type species of the genus was not selected until HOWDEN (1968) designated *Cetonia ynca* Weber, 1801 as type species. HOWDEN (1968) thought that the original specific epithet spelling was “*inca*” not “*ynca*” and therefore designated the type species by tautonomy following Art. 68.4 (ICZN). Even though in this case the absolute tautonomy was not met, we follow Art. 69.1.1 (ICZN 1999), which states that: “in the absence of a prior type fixation for a nominal genus or subgenus, an author is deemed to have designated one of the originally included nominal species as type species, if he or she states (for whatever reason, right or wrong) that it is the type or type species, or uses an equivalent term, and if it is clear that that author accepts it as the type species.” Therefore, the subsequent designation of *Cetonia ynca* as type species of *Inca* by HOWDEN (1968) is valid.

Distribution. Known from Tamaulipas in Mexico through Central and South America to Paraguay and northern Argentina (Fig. 6). There are no records known to us from Venezuela, Guyana, and Suriname, but specimens collected in Trinidad and close to the Venezuela and Suriname borders indicate the genus might well be distributed in those countries.

Examined material not identified to species (*I. irroratus/burmeisteri* group). **BRAZIL:** RIO DE JANEIRO: 1 ♂ (BCRC): Brazil, Rio de Janeiro, Rio Friburgo, x.1983, C. Behduin leg.; 1 ♀ (USNM): Brazil, Serra da Carioca. Remarks. SCHENKLING (1922), BLACKWELDER (1944), KRAJCIK (1999, 2012) and MORÓN & VAZ-DE-MELLO (2007) erroneously listed Schaum as the only author.

Inca bonplandi (Gyllenhal, 1817)

Trichius bonplandi Gyllenhal, 1817: 196 [original combination]
Inca serricollis (partim): GORY & PERCHERON (1833): 108 [*I. bonplandi* synonymized with *I. serricollis* ignoring priority]
Inca bonplandi: BURMEISTER & SCHAUM (1840): 380 [new combination and resurrection of the senior synonym]
Inca bonplandi: LAPORTE (1840): 159 [combination with misspelled genus name]
Inca bomplandi: BRUCH (1911): 216 [incorrect subsequent spelling, unavailable name]
Inca tapajo Perty, 1830. **Junior subjective synonym.**
Inca tapajo Perty, 1830: 51 [original combination]. Synonymized with *I. serricollis* by GORY & PERCHERON (1833: 108).
Inca tapago: LAPORTE (1840): 159 [combination with misspelled genus name and incorrect subsequent spelling of specific epithet, unavailable name]
Inca tapayo: GORY & PERCHERON (1833): 108, 401 [incorrect subsequent spelling, unavailable name]
Inca bonplandi var. *tapajo*: SCHENKLING (1922): 4 [downgraded to variety, unjustified act]

Inca serricollis LePeletier & Serville, 1828. **Junior subjective synonym.**

Goliath serricollis: Dejean (1821): 61 [nomen nudum, unavailable name]
Inca serricollis LePeletier & Serville, 1828 [original combination]. Synonymized with *I. bonplandi* and incorrectly treated as senior synonym by GORY & PERCHERON (1833: 108); priority corrected by BURMEISTER & SCHAUM (1840: 380).

Ynca servicollis: LAPORTE (1840): 159 [combination with misspelled genus name; incorrect subsequent spelling, unavailable name]

Goliathus fasciatus Kirby, 1819. **Junior subjective synonym.**

Goliathus fasciatus Kirby, 1819: 407 [original combination]. Synonymized by BURMEISTER & SCHAUM (1840: 380).

Inca fasciata: BLACKWELDER (1944): 260 [new combination, incorrect gender agreement]

Goliathus inscriptus Kirby, 1819. **Junior subjective synonym.**

Goliathus inscriptus Kirby, 1819: 407 [original combination]. Synonymized by BURMEISTER & SCHAUM (1840: 380).

Inca bonplandi var. *inscriptus*: SCHENKLING (1922): 4 [downgraded to variety, unjustified]

Inca bonplandi v. *inscripta*: BLACKWELDER (1944): 260 [incorrect gender agreement]

Goliathus tricuspis Drapiez, 1820. **Junior subjective synonym.**

Goliathus tricuspis Drapiez, 1820: 272 [original combination]. Synonymized by BURMEISTER & SCHAUM (1840: 380).

Types. *Inca bonplandi*: One male syntype in NHRS and one female syntype in UUZM. *Inca tapujo*: Seven specimens of *Inca bonplandi* are deposited in ZSM and could be syntypes of *I. tapujo* (SCHERER 1983). *Goliathus inscriptus*: One male syntype in BMNH. *Goliathus faciatus*: one male syntype in BMNH. The types of *Inca serricollis* and *Goliathus tricuspis* were not located by us.

Locality records from literature. ARGENTINA: JUJUY (BRUCH 1911), MISIONES (BRUCH 1911, RICHTER 1913, DI IORIO 2013). BOLIVIA (DI IORIO 2013). Remarks. BLACKWELDER (1944) erroneously attributed authorship of *Inca serricollis* to GORY & PERCHERON (1833). SCHENKLING (1922) listed “*tapujo*” and “*inscriptus*” as variations of *Inca bonplandi* (Gyllenhal, 1817), and there seems to be no evident justification for Schenckling’s listing. KRAJCIK (1999) incorrectly gave the year for *Inca tapujo* as 1834 and not 1830. BURMEISTER & SCHAUM (1840) stated that *Goliathus inscriptus* Kirby, 1819 only represents an “insignificant variety” and later BURMEISTER & SCHAUM (1841) added that it is only a darker variant of *Inca bonplandi*. *Goliathus fasciatus* Kirby, 1819 and *Goliathus tricuspis* Drapiez, 1820 were listed by BURMEISTER & SCHAUM (1840) as synonyms of *Inca bonplandi* without further comment. DI IORIO (2013) interpreted the synonymous listing of *Goliath fasciatus* and *Goliath inscriptus* under *Inca bonplandi* only as a reference, but we acknowledge that BURMEISTER & SCHAUM (1840) established these synonymies. SCHAUM (1849) stated that the type of *Goliathus fasciatus* Kirby, 1819 only represents a “slight variation” of *Inca bonplandi*. He clearly intended to keep Kirby’s species in synonymy. BLACKWELDER (1944) unjustifiably emended and combined the name to *Inca fasciata*. Both, BURMEISTER & SCHAUM (1840) and LAPORTE (1840) resurrected *Inca bonplandi* as valid name over the junior synonyms, but BURMEISTER & SCHAUM (1840) was published in July–September 1840 (BOUSQUET 2012), whereas LAPORTE (1840) was published as earliest as on 26 December 1840 (BOUSQUET 2016). Therefore, BURMEISTER & SCHAUM (1840) deserve credit for the resurrection.

Inca burmeisteri Burmeister, 1847

Inca burmeisteri Burmeister, 1847: 568 [original combination]

Types. Three specimens (possible syntypes) of *Inca burmeisteri* in MLUH. No types were found in ZMHB.

Locality records. BRAZIL (BURMEISTER 1847).

Additional material. BRAZIL: MINAS GERAIS: 1 ♂ (MZSP): Ouro Preto, 27.xii.1998, F. Ohaus leg. RIO DE JANEIRO: 1 ♂ (UFRPE): Brasil, Rio de Janeiro, Nova Friburgo, Garrafão, Cascatinha, 23.iii.2003; 1 ♀ (UFRPE): Brasil, Rio de Janeiro, Nova Friburgo, Garrafão, Cascatinha, 6.iv.2002; 1 ♀ (UFRPE): Brasil, Rio de Janeiro, Nova Friburgo, Garrafão, Cascatinha, iii.1999, R. Vassalo leg., Coleção F. & P. Grossi; 1 ♂ (UFRPE): Brasil, Rio de Janeiro, Nova Friburgo, Garrafão, Cascatinha, 27.iii.2004, R. Vassalo leg.

Remarks. KRAJCIK (1999) erroneously listed "*I. irrorata* Burmeister, 1842" as a synonym of *I. burmeisteri*, but BURMEISTER (1842) only redescribed *I. irroratus* Chevrolat, 1833 based on a missidentification and is not the author of the name. BURMEISTER (1847) clarified that his 1842 re-description was actually based on *I. burmeisteri* specimens.

Inca clathratus clathratus (Olivier, 1792)

(Figs 5E–F)

Cetonia clathrata Olivier, 1792: 93 [original combination]

Trichius clathratus: SCHÖNHERR (1817): 100 [new combination]

Inca clathratus: SCHAUM (1844): 399 [new combination]

Inca fabricii Perty, 1830. **Junior subjective synonym.**

Inca fabricii Perty, 1830: 51 [original combination]. Synonymized with *I. weberi* by BURMEISTER & SCHAUM (1840: 379).

Ynca fabricii: LAPORTE (1840): 158 [combination with misspelled genus name]

Inca weberi LePeletier & Serville, 1828. **Junior objective synonym.**

Inca weberi LePeletier & Serville, 1828: 381 [unjustified replacement name for *Cetonia ynca*]. Synonymized with *I. ynca* by GORY & PERCHERON (1833: 103), with *I. clathratus* by SCHAUM (1844: 399).

Cetonia ynca Weber, 1801. **Junior subjective synonym.**

Cetonia ynca Weber, 1801: 66 [original combination]. Synonymized with *I. clathratus* by SCHAUM (1844: 399).

Inca ynca: GORY & PERCHERON (1833): 103 [new combination]

Types. *Cetonia clathrata*: Syntypes are probably in MNHN since Olivier's collection is deposited there. *Inca fabricii*: One specimen is deposited in ZSM and could be a syntype (SCHERER 1983). *Cetonia ynca* and *Inca weberi*: Types were not found in the Zoologisches Museum in Kiel (pers. comm. by Michael Kuhlmann).

Locality records from literature. ARGENTINA: JUJUY (DI IORIO 2013), MISIONES (BRUCH 1911, HAYWARD 1935–1936, DI IORIO 2013), SALTA (DI IORIO 2013). BRAZIL: MINAS GERAIS (PERTY 1830). COLOMBIA: VALLE DEL CAUCA (RESTREPO-GIRALDO et al. 2003). ECUADOR: BOLÍVAR (CAMPOS 1921). FRENCH GUIANA: CAYENNE (OLIVIER 1792). GUIANA (BATES 1889, HOWDEN 1968). PERU (WEBER 1801): HUANUCO (SOUKUP 1942), SAN MARTÍN (SOUKUP 1942).

Additional material examined. BOLIVIA: COCHABAMBA: 1 ♂ 1 ♀ (RBINS): Bolivia, Cristal Mayu, 450 m, iv.1984, G. Lecourt leg. SANTA CRUZ: 1 ♀ (BCRC): Bolivia, Santa Cruz, Los Volcanes Reserve, ii.2013, S. UCAYALI: 1 ♂ (LGPC): Peru, Ucayali, Atalaya, iii. 2011; 1 ♀ (ZMUH): Peru, Ucayali, 1914.

Remarks. GORY & PERCHERON (1833) erroneously attributed *Inca ynca* to Fabricius, 1801. But FABRICIUS (1801) clearly attributed the authorship to WEBER (1801). BURMEISTER & SCHAUM (1840: 420) stated that they never saw *Cetonia clathrata* Olivier, 1792 and therefore only listed it at the end of their work. KRAJCIK (1999) listed the year of description of *Inca fabricii* Perty as 1834 instead of 1830, but this species was described in the first fascicle on

page 51 which was published in 1830 (BOUSQUET 2016). LEPELETIER & SERVILLE (1828) introduced the name *Inca weberi* for *Cetonia ynca* Weber, 1801, probably to remove the ‘tautonymy’ which, for example, is not allowed in botany. SCHAUM (1844) synonymized *Inca weberi* LePeletier & Serville, 1828 with *Inca clathratus* Olivier, 1792.

Inca clathratus quesneli Boos & Ratcliffe, 1985

Inca clathrata quesneli Boos & Ratcliffe, 1985: 382

Inca clathratus quesneli: [gender agreement corrected here]

Types. Holotype ♂, allotype ♀ and paratypes in BMNH (Boos & RATCLIFFE 1985); paratypes in FSCA, USNM, NHMB, MNHN, CMNC, UNSM, private collections of Julius Boos (deceased) and John Glaser (Baltimore) (Boos & RATCLIFFE 1985).

Locality records from literature. TRINIDAD (Boos & RATCLIFFE 1985).

Additional material. TRINIDAD: 1 ♀ (USNM): Trinidad, Maracas Bay, June 1969, J. Boos; 1 ♂ 1 ♀ (USNM): Trinidad, Maraval.

Inca clathratus sommeri Westwood, 1844

(Fig. 5G)

Inca sommeri Westwood, 1844: 99 [original combination]

Inca clathratus (partim): SCHAUM (1844: 399), SCHAUM (1849: 288)

[considered as junior synonym of *I. clathratus*]

Inca sommeri: ERICHSON (1845): 108 [species status restored]

Inca clathrata sommeri: BATES (1889): 377 [subspecific status established]

Inca clathratus sommeri: [gender agreement corrected here]

Types. One female syntype in BMNH.

Locality records from literature. BELIZE: CAYO (BATES 1889, HOWDEN 1968). GUATEMALA: IZABAL (HOWDEN 1968). MEXICO: CHIAPAS (HOWDEN 1968, MORÓN 1983), HIDALGO (MORÓN 1994), OAXACA (WESTWOOD 1844), TAMAULIPAS (REYES-CASTILLO & LARA-VILLALÓN 1994), VERACRUZ (HOWDEN 1968). NICARAGUA: CHONTALES (BATES 1889, HOWDEN 1968). PANAMA: CHIRIQUI (BATES 1889, HOWDEN 1968).

Additional material examined. COSTARICA: PUNTARENAS: 2 ♂♂ 2 ♀♀ (DBPC): Costa Rica, Osa Corcovado, vi.2017; 4 ♂♂ 2 ♀♀ (DBPC): Costa Rica, Osa Corcovado, vi.2016. Ratcliffe leg.; 1 ♀ (ZMUH): Panama, Chiriquí, 1911.

Remarks. Many authors listed the publication date as Westwood, 1845 which is incorrect. According to BOUSQUET (2016) the pages 97 to 112 in *Arcana Entomologica Vol. II*. were published on 1 May 1844.

Inca irroratus Chevrolat, 1833

Inca irrorata Chevrolat, 1833: unpaginated [original combination]

Inca irroratus: BURMEISTER & SCHAUM (1840): 380 [mandatory change of gender agreement of species epithet]

Types. The single type was not found in the BMNH and might be deposited in the MNHN.

Locality records from literature. BRAZIL: RIO DE JANEIRO (CHEVROLAT 1833).

Remarks. See Remarks for *I. burmeisteri*.

Inca pulverulentus (Olivier, 1789)

Cetonia pulverulenta Olivier 1789: 57 [original combination]

Trichius pulverulentus: SCHÖNHERR (1817): 100 [new combination]

Inca barbicornis (partim): LEPELETIER & SERVILLE (1828): 381, [*I. pulverulenta* synonymized with *I. barbicornis* ignoring priority]

Inca pulverulentus: BURMEISTER & SCHAUM (1840): 379 [mandatory change of gender of species epithet, new combination and resurrection from synonymy]

Goliath barbicine Latreille, 1816. Junior subjective synonym.

Goliath barbicine Latreille, 1816: 187 [original combination]. Synonymized with *I. pulverulentus* and incorrectly treated as senior synonym by LEPELETIER & SERVILLE (1828: 381); priority corrected by BURMEISTER & SCHAUM (1840: 379).

Inca barbicornis: LEPELETIER & SERVILLE (1828): 381 [new combination and mandatory change of gender of species epithet]

Types. The types of both *Cetonia pulverulenta* and *Goliath barbicine* might be deposited in the MNHN.

Locality records from literature. BRAZIL: RIO DE JANEIRO (OHAUS 1900). ARGENTINA: JUJUY (DI IORIO 2013), MISIONES (BRUCH 1911, DI IORIO 2013, RICHTER 1913). PARAGUAY: ITAPÚA (DI IORIO 2013).

Remarks. DEJEAN (1821) and LAPORTE (1840) erroneously attributed the authorship of *Inca barbicornis* to MacLeay. All authors after Latreille cite the year for *Inca barbicornis* as 1817, but following BUSQUET (2016), Latreille's description was already published in 1816. LEPELETIER & SERVILLE (1828) synonymized *I. barbicornis* (Latreille, 1816) with *I. pulverulentus* (Olivier, 1789), keeping *I. barbicornis* as valid name. BURMEISTER & SCHAUM (1840) rightfully reversed the usage with *I. pulverulentus* as valid name.

Genus *Pantodinus* Burmeister, 1847

Pantodinus Burmeister 1847: 291 [original description]
Jeannelosis Bourgin, 1945. **Junior subjective synonym.** Synonymized by HOWDEN (1972: 653).

Type species. *Pantodinus*: *Pantodinus klugii* Burmeister, 1847 (=*Pantodinus klugi* Burmeister, 1847) [by monotypy]. *Jeannelosis*: *Jeannelosis auriculatus* Bourgin, 1945 [by monotypy].

Gender. Masculine.

Species included. 1 species.

Distribution. Known from South Mexico to Guatemala (Fig. 6).

Pantodinus klugi Burmeister, 1847

(Figs 5K–M)

Pantodinus klugii Burmeister, 1847: 292 [original combination]
Pantodinus klugi: CANDEZE (1873): XLI [incorrect subsequent spelling, here conserved according to Art. 33.3.1 of ICBN (1999)]
Jeannelosis auriculatus Bourgin, 1945. **Junior subjective synonym.** *Jeannelosis auriculatus* Bourgin, 1945: 120 [original combination]. Synonymized by HOWDEN (1972: 653).

Types. *Pantodinus klugi*. HOWDEN (1972) stated that the *Pantodinus klugi* type location is unknown to him. Burmeister described the species based on specimen(s) from the Melly collection, which is housed in MNHG. The MNHG houses one male specimen labelled "Coll. Melly. sans patrie" and "592/3 coll. Melly". If this specimen is a syntype remains unclear. *Jeannelosis auriculatus*: One male holotype in MNHN (BOURGIN 1945). **Locality records from literature.** GUATEMALA: CHIMALTENANGO (MORÓN & VAZ-DE-MELLO 2007), GUATEMALA (HOWDEN 1972), QUETZALTENANGO (MORÓN & VAZ-DE-MELLO 2007), SACATEPÉQUEZ (HOWDEN 2010), SAN MARCOS (MORÓN & VAZ-DE-MELLO 2007), SOLOLÁ (HOWDEN 1972, MORÓN & VAZ-DE-MELLO 2007). MEXICO: CHIAPAS (MORÓN et al. 1997, MORÓN & VAZ-DE-MELLO 2007).

Additional material examined. GUATEMALA: 1 ♂ 1 ♀ (RBINS): Guatemala, 15.iii.1873. CHIMALTENANGO: 3 ♂♂ (DBPC): Guatemala, Zaragoza, vii.1994; 1 ♂ (UNSM): Guatemala, Chimaltenango, San Jose Chirijuya, viii.1975; 2 ♂♂ (BMNH): Guatelama. Rodriguez, Slope of the Volcan de

Acatenango, near Patricia, 7000 ft., Godman-Salvin Coll. GUATEMALA: 5 ♂♂ 1 ♀ (SLCC): Guatemala, El Aguacate, Mpio, Mixco, 1900m, iv.1978. QUETZALTENANGO: 1 ♂ 1 ♀ (UNSM): Guatemala, Quetzaltenango, Cantel, iv.1985; 4 ♂♂ 1 ♀ (UNSM): Guatemala, Quetzaltenango, Las Fuentes Georginas, Cerro Zunil, vi.2011, B. C. Ratcliffe leg.; 5 ♂♂ 2 ♀♀ (BCRC): Guatemala, Quetzaltenango, Las Fuentes Georginas, Cerro Zunil, vi.2011, B. C. Ratcliffe leg. QUICHE: 1 ♂ (UNSM): Guatemala, El Quiche, Chichicastenango (7.3 km S), v.1973. SACATEPÉQUEZ: 1 ♂ (PSPC): Guatemala: Sacatepéquez, Cerro Alux, 2260 m, 24.vi.1993, B. D. Gill leg; 1 ♂ (PSPC): Guatemala, Sacatepéquez, Cerro Alux, 2260m, 9.vi.1991, B. D. Gill leg.; 4 ♂♂ (ARPC): Guatemala, Sacatepéquez, Sn. Lucas, Cerro Alux, 2200 m, 26.vi.1996; 1 ♂ (BCRC): Guatemala, Sacatepequez, Cerro Carmo-na, Antigua Guatemala, vii.2009, B. C. Ratcliffe leg.; 1 spec. (EAPZ): Guatemala, Sacatepéquez, Cerro Alux, 12.vi.1991, H. & A. Howden leg., 013.825EAPZ; 1 ♂ 1 ♀ (SLCC): Guatemala, San Lucas, Cerro Alux, Sacatepequez, 2200m, 25.vi.1997, Pierre Bélanger leg. SAN MARCOS: 1 ♀ (ARPC): Guatemala, San Marcos, v.2009; 4 ♂♂ 1 ♀ (UNSM): Guatemala, San Marcos above La Fraternidad, vi.1997, J. Monzon leg. SOLOLÁ: 2 ♂♂ 2 ♀♀ (SLCC): Guatemala, Solola, Xajaac, 2325 m, 15.v.1988. MEXICO: CHIAPAS: 1 ♂ (CEMT): Mexico, Chiapas, Mpio: Angel A. Corzo, Reserva "El Triunfo", 13.v.2005, G. Gomez leg.

Remarks. CANDEZE (1873), while transferring *Pantodinus klugii* Burmeister, 1847 from "Dynastides" to "Trichides", misspelled the species epithet as "klugi" lacking one "i". This is an incorrect subsequent spelling, which has since been used by some authors (CANDEZE 1873; BATES 1889; KOLBE 1909; SCHENKLING 1922; BLACKWELDER 1944; HOWDEN 1968, 1972, 2010; MORÓN & KRIKKEN 1990; MORÓN et al. 1997; MORÓN & VAZ-DE-MELLO 2017). At the same time *P. klugii* was used only once by WESTWOOD (1878). We follow Art. 33.3.1 (ICZN 1999), which states that "when an incorrect subsequent spelling is in prevailing usage and it is attributed to the publication of the original spelling, the subsequent spelling and attribution are to be preserved and the spelling is deemed to be a correct original spelling". Since *Pantodinus klugii* Burmeister, 1847 is in prevailing usage it is deemed to be a correct original spelling. KRAJCIK (1999, 2012) omitted *Jeannelosis auriculatus*.

List of valid Incini taxa

Incini Burmeister, 1842

Archedinus Morón & Krikken, 1990

Archedinus antoshkai Seidel & Arriaga-Varela, 2018
Archedinus howdeni Morón & Vaz-de-Mello, 2007
Archedinus relictus Morón & Krikken, 1990

Coelocratus Burmeister, 1842

Coelocratus rufipennis (Gory & Percheron, 1833)

Golinca Thomson, 1878

Golinca bifrons (Olivier, 1789)
Golinca davisi (Waterhouse, 1877)
Golinca ishiharai Nagai, 1994
Golinca trevisani Valois & Silva, 2015

Inca LePeletier & Serville, 1828

Inca besckii Burmeister & Schaum, 1840
Inca bonplandi (Gyllenhal, 1817)
Inca burmeisteri Burmeister, 1847
Inca clathratus (Olivier, 1792)
Inca clathratus quesneli Boos & Ratcliffe, 1985
Inca clathratus sommeri Westwood, 1844

Inca irroratus Chevrolat, 1833
Inca pulverulentus (Olivier, 1789)

Pantodinus Burmeister, 1847
Pantodinus klugi Burmeister, 1847

Discussion

Despite the relatively small number of taxa included in the tribe Incini, significant nomenclatural disarray was found. Our catalogue gives a framework for future research on the tribe since we uncovered and cleared all known nomenclatural problems. However, there are still some open taxonomic, faunistic, and ecological questions that need further investigation.

Archedinus now contains a third, much smaller species, *Archedinus antoshkai*, that is morphologically closer to *A. howdeni* than to *A. relictus*, specifically in regards to their very similar genital morphology. The distribution range of *Archedinus* is extended to Honduras, Cerro las Minas, 400 km further to the east from the previous records. So far, *Archedinus* has been recorded at three mountain localities spanning a range of approximately 520 km with no records in Guatemala. At the known localities, only one species has been recorded, indicating species' distributions may not overlap. We expect that within this wide range, additional *Archedinus* records and new species could be discovered. The altitudinal range of members of this genus is also increased since the holotype of *A. antoshkai* was found in a cloud forest at about 750 m higher than previous records. The immature stages of *A. relictus* were treated by MORÓN (1995). However, adult females and all immature stages of *Archedinus howdeni* and *Archedinus antoshkai* remain unknown. Since all published records are based on accidental findings, knowledge of the natural history of all species is very limited.

Specimens of the monotypic genus *Coelocratus* are very scarce in collections. Only two additional specimens were found by us with Cayenne as the locality. Since, French Guiana has been intensively sampled by collectors and no further specimens have been found, we doubt this taxon is found within this region. Additional collecting effort is necessary to establish its distribution and to record its ecological data.

The genus *Golinca* is in a problematic taxonomic state. The latest publications (NAGAI 1994, VALOIS & SILVA 2015) described two species without reviewing any type material. Hence, it is impossible to judge the validity of the youngest two species in the genus. Here we provide many new records extending the known distribution range of the genus significantly. Ecology and immature stages of the genus remain unknown.

The genus *Inca* is also in need of revision. Types for *Cetonia clathrata* Olivier, 1792, *Inca irroratus* Chevrolat, 1833, *Cetonia ynca* Weber, 1801, *Inca serricollis* LePeletier & Serville, 1828, *Goliathus tricuspidis* Drapiez, 1820, *Goliath barbicornis* Latreille, 1816 and *Cetonia pulverulenta* Olivier, 1789 were not seen or located by us and have not been published by other authors. Here we significantly enlarged the knowledge of the distribution of the genus, but

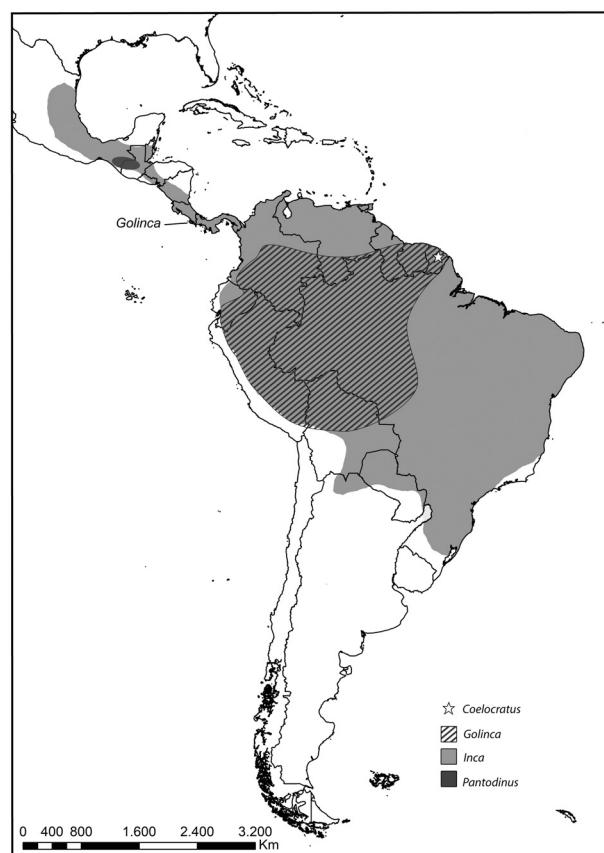

Fig 6. Generalized distribution map of *Coelocratus* Burmeister, 1842 (star), *Golinca* Thomson, 1878 (stripes), *Inca* LePeletier & Serville, 1828 (gray) and *Pantodinus* Burmeister, 1847 (black) in Central and South America.

still data for species like *Inca burmeisteri* and *I. irroratus* remain scarce. The ecology and morphology of immature stages of *I. clathratus sommeri*, *I. bonplandi* and *I. pulverulentus* have been described (COSTA et al. 1988; MÓRON 1983, 1995; SOUSA et al. 2018).

The distribution of the monotypic genus *Pantodinus* is well established, and both sexes are known and commonly collected. Nevertheless, the ecology and immature stages remain unknown.

Acknowledgments

We thank Anton Kozlov (Moscow, Russia) who kindly provided and donated the material for description. We are indebted to François Génier (CMNC), Damir Kovac (SMF), Giulio Cuccodoro (MNHG), Stephane LeTirant (SLCC), René Limoges (Insectarium de Montréal), Dominik Vondráček (NMPC), Joachim Händel (MLUH), and Andrés Ramírez-Ponce (Conacyt-Laboratorio Regional de Biodiversidad y Cultivo de Tejidos Vegetales, Tlaxcala, Mexico) for taking pictures of specimens. We thank Andrew Smith (CMNC) for improving the manuscript. We thank Kyohei Watanabe for helping us to locate the *Golinca ishiharai* types. We thank all the people listed in the Material and methods for providing us with data from their collections. We thank Jean Rouch (Düsseldorf, Germany) for making his Incini material available for research in RBINS. Special thanks goes to Karla Schnei-

der (MLUH), Joachim Händel (MLUH), Johannes Bergsten (NHRS), Martin Husemann (ZMUH), and Hans Mejlon (UUZM) for hosting the first author in their collections. Max Barclay (BMNH) is thanked for loaning the Incini types under his care. We thank Viktor Sinyaev (Moscow, Russia) for providing the habitat photos and Aleš Bezděk (Biology Centre of the Czech Academy of Sciences CAS, Institute of Entomology, České Budějovice, Czech Republic), Brett Ratcliffe (UNSM), and Lukáš Sekerka (NMPC) for helping us with literature. Miguel Ángel Morón Ríos (1954–2017) is thanked for initially commenting on the new *Archedinus*. His contributions to entomology will be dearly missed. MS studied the ZMHB collection with financial support of the SYNTHESYS project DE-TAF-6712. The work by MS and EAV was supported by the grant SVV 260 434/2018 to the Department of Zoology, Charles University, Prague, Czech Republic. RS was financially supported by the Coordenação de Aperfeiçoamento de Pessoal de Nível Superior (CAPES).
