

COINS OF THE OTTOMAN SULTANS FOUND IN THE TERRITORY OF THE CZECH REPUBLIC FROM 1996 TO 2018

Vlastimil Novák[†]

ABSTRACT: Ottoman coins have been registered in the Czech Lands since the beginning of the 18th century and have been systematically documented since the mid-19th century. The latest actualization comes from 1996, but the following massive use of metal detectors showed a serious need for a new summarization. Up until 2018, some 151 hoards/ single finds with the Ottoman coins, forgeries, and jetons have been registered in the territory of the Czech Republic. These coins came to the mentioned territory via the Ottoman European expansion since the 16th century, and their flow reached its peak in the 17th century. The massive appearance of the Ottoman coins in Bohemia, partly in Moravia and Silesia, in the 17th century represents a phenomenon connected with the Thirty Years War. In south and central Moravia, it is explained by the direct military impact of the Ottoman armies. The later import of these coins is associated with the Napoleonic Wars and with the Austro-Hungarian period through its Balkan connection.

KEYWORDS: Ottoman Sultans – coins – single finds – hoards – forgery – jeton – Thirty Years War – 16th–19th centuries – Czech Republic

Introduction

The coins¹ struck under the Ottoman Sultans (previously described as the Turkish coins) started to come to Bohemia, Moravia, and Silesia in connection with the aggressive Ottoman European expansion in the 16th century. Their flow reached its peak in the 17th century. In Bohemia, partly in Moravia and Silesia, they are connected with the Thirty Years War, and in south and central Moravia, their appearance is explained by the direct military impact of the Ottoman (and Tartar) element. Since the second half of the 19th century, the Ottoman coins have been sporadically registered in the individual specialized articles, and in the 1950s, they were summarized in four complex volumes generally covering all coin hoards in the territory of Bohemia, Moravia, and Silesia.² In the 1960s, J. Štěpková offered an extensive survey of the Ottoman coins found in the territory of Czechoslovakia of that time.³ Later on, she actualized the list of the newly discovered Ottoman pieces in Slovakia.⁴ In the Czech lands, the tradition of the systematic publishing of all newly found coins stopped in the 1980s in connection with the interrupted series of the *Numismatický sborník* (published again since 2005).

¹ The manuscript was edited under the supervision of Jiří Militký and Dorota Malarczyk. This work was financially supported by Ministry of Culture of the Czech Republic (DKRVO 2019–2023/11.VI.b, National Museum, 00023272).

Since the 1990s, the situation in monitoring of coin hoards has changed completely: the unreformed, restrictive, and rigid legislation could not respond to development and massive private use of modern prospection technologies (metal detectors). Information about hoards rapidly increased, but its credibility, quality, and value decreased due to the usual reluctance of finders to cooperate. Focusing on the significant and numerous activities of clubs – mostly operating on the internet – it is possible to gain a reasonable quantity of data, but without the precise provenance, mostly without metrology, and with non-standard photographs. In spite of all these facts, some gradual attempts to summarize officially the Ottoman coins found in the new millennium have been made.⁵ This article is primarily aimed at the most detailed list possible covering the Ottoman coins found in the territory of the Czech Republic between 1996 and 2018 based on official sources (publications, reported unpublished coins) and also on the prevailing unofficial sources such as different websites of various amateur clubs and numerous claims for the attribution of coins. All of the data used in the text should help in the interpretation of these coins in the mentioned historical context of the studied region.

Characteristic Features of the Ottoman coinage

The coins of the Ottoman sultans are characterized as Islamic issues. They bear inscriptions in Arabic, and their religious legends are based on Islamic ideology. Their mono-epigraphic legends have typical calligraphic characters. Basically, their obverse legends present the Ottoman sultan's name with all the necessary titles and epithets, the particular religious formulas inclusive. The name of the ruler is performed in the form called *tughrā*, which is a stylized signature used as the state symbol and the ruler's emblem. The reverse bears standard legends with the mint name and the Hijra date in numeral form.⁶ Between 1390 and 1481, the silver coins were dated in irregular intervals (the so-called serial dating). After 1481, the coins only had the date of enthronization, and basically, they had been struck during the entire ruler's era (i.e., the coins struck between 1481 and 1787 can be dated only by the interval of rule of a particular ruler.⁷ In some cases – based on the archaeological data – it is possible to precisely specify the time span for activities of the individual mints.⁸ Starting with the mid-18th century, the concrete production year has also been added to the enthronization date. The significant variability of coinage derived from the territorial expansion, and evolution of the denomination structure copied the systems of the surrounding countries to a considerable extent. The specific content of precious metals in coins was absolutely dependent on the economic stability and military success of the entire Ottoman Empire. Since the 14th century, the Ottoman monetary system from its very beginning has been exclusively based on silver. In 1327, during the rule of Sultan Orhan, the production of silver coins called *akçe* started. Their weight was about 1.16 g, and they contained about 90% of silver. Since the second half of the 15th century, their weight started to decrease significantly, and their content of silver decreased as well. Similarly as in other parts of Europe (mainly in the Mediterranean), also in the Ottoman empire, various types of non-Islamic silver coins circulated. They were generally called *qurush* (sg. *qirsh*) –

derived from the Latin *grossus*. Also gold coins were very popular; the Venetian ducats were called *filuri* (derived from Italian *florin*) and the Hungarian ducats were called *macar altini* (an exact Turkish translation for the Hungarian ducats). The mentioned ducats served as prototypes for coins called *altin* or *sultani*. Their minting started in 1451–1481. After the occupation of Egypt (1516), massive production of high quality gold coins of the *sultani* type began, and their weight (in contrast with silver) was stabilized for more than two hundred years at 3.286 g, and because of their quality, they became very popular in Europe during the Thirty Years War. The Ottoman copper coins, labeled by the Mongolian word *manghirs*, differentiated individually from each other in weight, and they were characteristic by their very simple iconography (heraldic symbols, floral ornaments, or only the sultan's name). A radical decrease in the quality of the silver *akçe* at the beginning of the 16th century initiated the introduction of a new denomination – *para* (equal to 3–4 *akçes*). Besides these coins, silver *dirhams* (about 3 g) were struck in the Middle East. The gradual debasing of silver led to the introduction of new silver denominations in 1687–1691 – *qirsh* (called also *piaster*, equal to 40 *paras*) and *zolota* (equal to 30 *paras*). The following Ottoman monetary history was characterized by the growing number of denominations, of which mainly gold coins had a more or less representative character. There is a problem with the absence of declared denominations on the flan starting with the 18th century, which is quite complicated in the case when there is a lack of metrological data for the archaeological numismatic material. Thus the attribution of the undeclared denomination is only based on the size and weight of a particular coin.

Ottoman Coins Found in Bohemia, Moravia, and Silesia

Ottoman coins found in the territory of the Czech Republic cover the time span between the 14th and 20th centuries. In general, the structure of the Ottoman coins buried since the end of the 16th century to the second half of the 18th century differs in Bohemia and Moravia, which is a result of different histories of both territories. Bohemia – compared to Moravia – had never been directly endangered by the Ottoman enemy. Moravia was attacked by the Turks (together with the Tartars) in 1599 for the first time. They reached the Moravian Valachia, and the Moravian military forces stopped them as far as near Javorník. Later on in 1623, with support of the Turks, the Duke of Transylvania Gabor Bethlen broke through to Znojmo, Brno, and Olomouc. The worst attacks came in 1663, when the Turks destroyed in three waves the south-eastern part of Moravia first, then they reached Velké Meziříčí, and the third attack totally devastated Valachia (Klobouky, Vizovice, Vsetín, Krásno). The last serious threat for Moravia dates to 1683, when during the siege of Vienna, the Turkish-Tartar troops endangered Brno and Přerov.⁹

Abdulmejid I (AH 1255–1277/ 1839–1861 CE)
Abdulaziz (AH 1277–1293/ 1861–1876 CE)
Murad V (AH 1293/ 1876 CE)
Abdulhamid II (AH 1293–1327/ 1876–1909 CE)
Mehmed V (AH 1327–1336/ 1909–1918 CE)
Mehmed VI (AH 1336–1341/ 1918–1923 CE)

Based on the data registered up until 1996, gold coins absolutely dominate among the Ottoman pieces found in Bohemia, Moravia, and Silesia. The decisive majority of those finds are of a group character (hoards), and they are evidently connected with the turbulent times of the Thirty Years War (1618–1648) and the period closely after that. The gold Ottoman coins had not been melted in the mentioned territory, and were minted again simply due to the high quality of the coin's metal (the gold gained by the Ottomans in Egypt in 1516). They appeared in hoards since the end of the 16th century up to the very end of the 18th century. Their precise production dating is complicated because of the exclusively presented dates of enthronization. Generally, they are represented by issues struck between 1520 to 1640. The gold Ottoman denominations of the *sultani* type¹⁰ are most massively incorporated in mixed group finds (hoards). In the case of the hoards with more Ottoman gold coins, a higher territorial diversity of mints is clearly visible, which points to a relatively long period of circulation of these coins and a significant scale of selection from their territorial production. The Ottoman gold coins in hoards, or as single finds, show heavy wear and traces of breaking or testing.

The Ottoman coins are regularly dispersed all over the Bohemian territory. In Moravia, these coins appear to the north of the following line: Jihlava – Brno – Přerov – Vsetín. They have been buried more or less evidently in connection with the Thirty Years War. In the territory situated to the south of the mentioned line, the coins found there can be very likely connected directly with the Ottoman military activities. The Ottoman copper coins are registered in Bohemia and Moravia as single finds and represent the late modern random import (Tab. 2, nos. 44, 46). Similarly, the silver coins there can be regarded as a quality admixture of peripheral character in the thesaurization hoards (Tab. 2, nos. 11, 32, 36, 39). The Ottoman high-quality gold coins (of the *sultani* type) – minimally mixed with silver pieces (2 hoards) – are documented in the absolute majority of hoards (34 hoards) in Bohemia and Moravia. The gold coins found as single (3 pieces, Tab. 2, nos. 1, 2, 37) in the periphery of the studied territory very likely confirm the above-described distribution, and in a way, they can point to Prague as a contemporary historical centre.

¹⁰ See above.

The newly documented Ottoman coins in the territory of Bohemia, Moravia, and Silesia between 1996 and 2018 show a rather different situation. On one side, the quantity of the registered material increased three times (117 pieces) compared to the previous period, and single finds totally dominate (6 hoards and 52 single finds with their *terminus post quem* up to 1800, and 40 single finds and 8 decorative jetons with their *terminus*

post quem after 1800), gold coins represent the minority of the corpus (26 pieces), and quite a substantive quantity of coins (51 pieces) belong to issues produced after 1800. Technically, the domination of single finds can be explained by the situation before 1989, when it was difficult to conceal a hoard, but individual coins could escape. Recently, it is possible to conceal anything, but curiosity and club prestige of the finders often dominate over possible (but in the decisive number of cases very unlikely) collision with the law.

All registered coins in Bohemia still confirm the theory concerning the territorially regularly dispersed finds in connection with the Thirty Years War, and individual pieces out of circulation lost in the non-Ottoman milieu. Historically later silver and copper coins can point to the period of the Napoleonic Wars or to the modern Austro-Hungarian period with its Balkan overlaps. In the Bohemian case, the copper coins evidently represent the secondary import. Decorative cloth jetons found in the territory of the Czech Republic can point to the local production for export (Jablonec), or to memorabilia imported from the Balkans.

The recent interpretation of the Moravian situation is still of a dual character: a) the territory to the south of the line Jihlava – Brno – Přerov – Vsetín was evidently in direct contact with the Ottoman element, and that is why the Ottoman gold appears there mainly individually, silver – similarly as in Slovakia – is connected with the Ottoman activities, and its mass or individual appearance seems to be historically more justified compared to Bohemia and the remaining parts of Moravia; b) the Moravian territory situated to the north of the mentioned line is again rather more characteristic by finds connected with the Thirty Years War.

From the historical-statistical point of view, it is possible to state that the coins found in the territory of the Czech Republic from 1996 to 2018 belong by their production dates to the period between 1360 and 1921. The earliest coin is represented by the *akçe* of Murad I (cat. no. 27), and the latest one by the 40 *para* of Mehmed VI (cat. no. 109). With their production dates of the 16th and 17th centuries, gold coins (with one exception for cat. no. 26, dating to 1818) cover the European thesaurization demand during the Thirty Years War (coins of the *sultani* type). Earlier Ottoman silver coins (with their production dates up to 1700) are mostly concentrated in the southern and central Moravian territory, which can be legitimately connected with the direct Ottoman activities up to the siege of Vienna (1683). The remaining silver coins – dominating in number – with their production dates around 1800 can be interpreted in connection with Napoleon's adventure in Egypt, later on with the Napoleonic Wars, and finally with the Austro-Hungarian period in the Balkans. In the case of copper coins, with the exception of the *manghir* from Loučka near Vsetín (cat. no. 75) – which is a relict of the attack in 1663 very likely – only the coins of Suleiman II (cat. nos. 79-89) can be classified in direct connection with the Turkish aggression and the siege of Vienna (1683).

Istanbul (Qustantiniya, Islambul on coins) evidently dominates among the Ottoman mints for the coins found from 1996 to 2018. Misr (i.e. Egypt, Cairo) is the second most frequent mint. In the case of gold coins, the following mints seem to be interesting: Halab (Aleppo, Syria, cat. no. 3), Jazair (Alger, cat. nos. 12, 21, 23) and Sidre Qapisı (Thessaloniki vilayet, continental Greece, cat. nos. 1, 4, 36). Among the silver issues, Edirne (cat. nos. 28, 30) and Nowar (Novo Brdo, Kosovo, cat. nos. 29, 32) attract special attention. Sometimes, relatively rare mints appear among the Ottoman earlier copper: Tarabulus Gharb (Tripoli, Libya, cat. no. 76), Brusa (north-west Anatolia, cat. no. 75) and Saray (Sarajevo, Bosnia, cat. no. 89). In the case of gold issues and larger silver pieces,

big central mints dominate (Istanbul, Misr), in the case of smaller and earlier silver denominations, as well as in the case of the copper coins, a larger territorial diversity with an inclination to the Balkans can be seen.

From a technical point of view, perforated pieces are worth noting (cat. nos. 16, 34, 37, 44, 53, 55–57, 71, 86, 91, 97–99, 103, 107). All decorative jetons have been pierced (cat. nos. 110–117). This kind of modification can give evidence of the secondary (decorative) use of the coins in their target (final) destination. The coins with pendant or traces of it (cat. nos. 26, 46, 47, 67), plus pieces modified for buttons (cat. nos. 66, 69, 72, 87, 90, 97) are of the same category. It is significant, that only four (among 34 pieces in total) of these decoratively modified coins were produced up until 1800. It is clear then, that the Ottoman coins found in the territory of the Czech Republic and produced before 1700 are more or less of the thesaurization character, and in other cases, their exotic aesthetic style (i.e., Arabic calligraphy) was given priority in a different historical era.

Forggeries of the Ottoman coins found in the territory of the Czech Republic can be seen as a special category. The silver gold plated forgery copying a gold coin from Vrchoslavice (Moravia, cat. no. 5), as well as the copper gold plated forgery from Louny předměstí (Bohemia, cat. no. 2), and also the forgery from Vysočina (cat. no. 17) evidently represent the increased contemporary demand for gold, and they are with the highest probability of a local (central European) provenance.¹¹ Also the plated *akçe* from Olomouc (cat. no. 33) is interesting – it could be regarded as an authentic Ottoman forgery coming to the mentioned territory, which had been accidentally lost there. The copper copy from the Náchod region (cat. no. 78) very likely represents an amateurish European contemporary attempt of falsifying popular Ottoman larger silver denominations. The copper Ottoman forgery found near Třebíč (cat. no. 77) can more likely point to a possible real impact of the Ottoman milieu, as seen in the case of the published contemporary Turkish forgeries.¹²

A Catalogue of Unpublished or Recently Published Ottoman Coins Found between 1996 and 2018

The listing is based on metal and dynastic chronology with the reported locality and date of discovery in ascending order. Because of the fact that the majority of data has come anonymously from the web, the metrological figures are not complete in every instance, and the photos are sometimes beyond the publication limits.

GOLD COINS

JANOVICE u KRAVAŘ (Česká Lípa distr.), 2013: unpublished

Suleiman I (AH 926–974/ 1520–1566 CE), AV *sultani*, mint: Sidre Qapisi, AH 926/ 1520 CE – hoard of 9 gold (one Ottoman piece) and two silver coins (*terminus post quem* 1637). Obv.: in plain and pearl circles, six lines of Arabic inscriptions – *sultān suleimān | bin salīm khān | ‘azza naṣruhu duriba | sidre qapisi fi | 926 | sana* (Sultan Suleiman | son of Selim Khan | may [Allah] guarantee his victory, struck | Sidre Qapisi in | AH 926 | the year of), ornaments in the field, slightly ex-centric

¹¹ For the Central European context in general, see Novák 2017.

¹² Kabaklarlı 1998.

Rev.: in plain and pearl circles, three lines of Arabic inscriptions – *dārib al-nadr | sāhib al-‘izz wa al-naṣr | fī al-barr wa al-bahr* (person striking precious metal | lord of glory and victory | on land and on sea), ornaments in the field, slightly ex-centric

Lit.: Album 2011, p. 143, no. 1317; Artuk amd Artuk 1974, pp. 521–522, nos. 1566–1568 var.; Damali 2010/2, p. 698, no. 10-SD-A4a; Ghalib 1890, pp. 89–90, nos. 220–222 var.; Lane-Poole 1883, p. 74, nos. 185–187 var.; Mitchiner 1977, p. 206, no. 1254 var.; Østrup 1938, -; Pere 1968, p. 112, no. 187; Schaendlinger 1973, p. 96; Sultan 1977, p. 114, nos. pp. 1075–1076 var.

COPPER COINS

LOUČKA (Vsetín distr.), reported 2014: unpublished

Mehmed I Çelebi (AH 806–816/ 1403–1413 CE), AE manghir, mint: Brusa, no date – admixture of a hoard of ancient coins (ancient coins, *terminus post quem* the 6th century AD – a French AE coin of the 16th/17th century also registered – the hoard remained unpublished.

Obv.: in plain and pearl circles, sultan's name in the form of *tughrā -muhammad bin sultān bāyezid* (Mehmed son of Sultan Bayezid).

Rev.: in plain and pearl circles, two lines of Arabic inscriptions divided by a horizontal line – *khullida mulkuhu | duriba brusa* (may [Allah] perpetuate his kingdom | struck in Brusa).

Lit.: Kabaklarli 1998, pp. 93–94, nos. 06–13.

075. 0.917 g; 15.6/14.1 mm; 6 h; irregular flan, legends partly off.

JAROMĚŘ, 2014: Novák 2015

Mehmed IV (AH 1058–1099/ 1648–1687 CE), AE manghir, mint: Tarabulus Gharb, date out of the preserved legend (1668–1679 CE by type) – group find of three coins (two of them Chinese).

Obv.: in plain and pearl circles, three lines of Arabic inscriptions – *sultān | muhammad khān | [bin] ibrāhīm* – (Sultan | Mehmed | [son] of Ibrahim Khan)

Rev.: in plain and pearl circles, five lines of Arabic inscriptions – *duriba | fi tarābulus | għarb | sana | ...* (struck | in Tarabulus | Għarb | the year of | ...).

Lit.: Kabaklarli 1998, pp. 478–480, nos. 19-Trbg-01–13.

076. 3.027 g; 17.5/13.8 mm; 8 h; irregular flan, legends partly off.

TŘEBÍČ, 2011: unpublished

A forgery copying the following prototype: Suleiman II (AH 1099–1102/ 1687–1691 CE), AE manghir, mint: Qustantiniya, AH 1099/ 1687 CE – single find, settlement of the 8th – 9th centuries in west Moravia, very likely a contemporary forgery.

Obv.: in a reeded circle, sultan´s name in the form of *tughrā*.

Rev.: in a reeded circle, four lines of Arabic inscriptions – ... | *duriba fi* | *qustantiniya* | 1099 (...) | struck in | Qustantiniya | AH 1099), retrograde name of mint.

Lit.: Kabaklarli 1998, for the type cf. p. 491, nos. 09–12 (contemporary forgeries).

077. Metrological data are not known (19 mm based on the photo with scale), debased metal, heavily worn.

NÁCHOD REGION, 2014: unpublished

A forgery copying the following prototype: Suleiman II (AH 1099–1102/ 1687–1691 CE), AE piaster (sic!), mint: Qustantiniya, AH 1099/ 1687 CE – group find of individual pieces, a copper coin copying a heavy silver coin, debased retrograde calligraphy – most likely a contemporary forgery (European?).

Obv.: in plain and pearl circles, five lines of Arabic inscriptions – *sultān suleimān* | *bin ibrāhīm* | *dāma mulkuha* *duriba fi* | *qustantiniya* | 1099 (Sultan Suleiman | son of Ibrahim | may [Allah] perpetuate his kingdom struck in | Qustantiniya | AH 1099).

Rev.: in plain and pearl circles, four lines of Arabic retrograde inscriptions – *sultān al-barrayn* | *wa khāqān al-bahrayn* | *al-sultān bin* | *al-sultān* (sultan of two continents – Europe and Asia Minor | lord of two seas – Aegean Sea and Black Sea | sultan, son | of sultan).

Lit.: Pere 1968, for the type cf. p. 176, no. 468.

078. Metrological data are not known (40 mm based on the photo with scale), debased metal.

SOUTH MORAVIAN REGION, April 28, 2013: unpublished

Suleiman II (AH 1099–1102/ 1687–1691 CE), AE manghir, mint: Qustantiniya, [AH 1099/ 1687 CE] – single find.

Obv.: in reeded and plain circles, sultan´s name in the form of *tughrā* centrally, ornaments in the field.

Rev.: in reeded and plain circles, three lines of Arabic inscriptions – *duriba fi* | *qustantiniya* | [1099] (struck in | Qustantiniya | [AH 1099]), ornaments in the field.

Summary

Up until 2018, some 151 finds of Ottoman coins, their forgeries, and decorative copies have been registered in the territory of the Czech Republic. These coins have come to the mentioned territory via the Ottoman European expansion since the 16th century, and their flow reached its peak in the 17th century. This phenomenon is connected with the Thirty Years War in Bohemia (partly in Moravia and in Silesia), but in south and central Moravia, it is explained by the direct military impact of the Ottoman element. The latest summarization of the discovered coins¹³ containing material registered up to 1996, and the newly found pieces in 1996–2018 bring a new view in the distribution and interpretation of Ottoman coins in the Czech Republic, mainly in the 18th and 19th

13 Novák 2006; Novák 2011.

centuries. In 1996, the Ottoman coins of the 16th and 17th centuries seemed to dominate absolutely in finds covering Bohemia, Moravia, and Silesia. The vast majority of finds (34 hoards with the Ottoman coins as admixture) were of a group character and were evidently connected with the Thirty Years War (1618–1648), and the period closely following it. The gold Ottoman coins – around 300 pieces – are basically represented in the mentioned territory by specimens struck from 1520 to 1640. They served relatively long in circulation, and they show a significant territorial diversity of origin, a high level of wear, and attempts of cutting into pieces and testing. The newly documented Ottoman coins in the territory of Bohemia, Moravia, and Silesia from 1996 to 2018 significantly enrich our knowledge about the appearance of these coins in the territory of the Czech Republic – the quantity of the registered material increased three times (117 pieces) compared to the previous period, and single finds totally dominate (6 hoards and 100 single finds), gold coins represent the clear minority of the corpus (26 pieces among 117 pieces in total), and quite a substantive quantity of coins (51 pieces) belong to issues produced after 1800. Historically later silver and copper coins can point to the period of the Napoleonic Wars or to the modern Austro-Hungarian period with its Balkan overlaps. In the case of Bohemia, the copper coins evidently represent a secondary import. Decorative jetons can point to the local production for export (Jablonec) or to memorabilia imported from the Balkans.

In general, the Ottoman coins are regularly dispersed all over the Bohemian territory, and they are connected with the following phenomena: the Thirty Years War, the Napoleonic Wars, and the Austro-Hungarian contacts in the Balkans. The same could basically be said about Moravia northwards behind the line Jihlava – Brno – Přerov – Vsetín. To the south of the mentioned line, the finds can be clearly connected directly with Ottoman military activities.

Among the gold Ottoman coins registered up to 1996, pieces struck in Istanbul (Qustantiniya), Egypt (Misr), Baghdad, Damascus, Aleppo (Halab), Alger, and Sidre Qapisi (Thessaloniki vilayet, continental Greece) are the most frequent. The following mints are regarded as rare for the gold issues: Amasiya (Siwas vilayet, Anatolia), Amid (Diyarbakr vilayet, Armenia), Hanja (today Gianja, Azerbaijan), Saqiz (Scio Island in the Greek Archipelago), Srebrenitcha (Srebrenica, Bosnia), Tarabulus Gharb (Tripoli, Libya), and Tuqat (Greek Eudoxia, north Cappadocia). The rarest mint for silver is represented by Tchaynitcha (south Bosnia). Istanbul (Qustantiniya, Islambul) evidently dominates among the Ottoman mints for the coins found between 1996 and 2018. Misr (Egypt, Cairo) is the second most frequent mint. In the case of gold coins, the following mints seem to be interesting: Halab (Aleppo, Syria), Jazair (Alger), and Sidre Qapisi (Thessaloniki vilayet, continental Greece). Among the silver issues, Edirne and Nowar (Novo Brdo, Kosovo) attracts special attention. Sometimes, relatively rare mints appear among the Ottoman earlier copper: Tarabulus Gharb (Tripoli, Libya), Brusa (north-west Anatolia), and Saray (Sarajevo, Bosnia). In the case of gold issues and larger silver pieces, big central mints dominate (Istanbul, Misr), in the case of smaller and earlier silver denominations, as well as in the case of copper coins, a larger territorial diversity with an inclination to the Balkans can be seen.

From a technical point of view, perforated pieces are worth noting (all decorative jetons have been pierced). This kind of modification can give evidence of a secondary (decorative) use of the coins in their target (final) destination. The coins with pendant or traces of it plus pieces modified for buttons are of the same category. It is clear that

the Ottoman coins found in the territory of the Czech Republic and produced before 1700 are more or less of the thesaurization character, and in other cases, their exotic aesthetic style (i.e., Arabic calligraphy) was given priority in a different historical era. Forgeries of the Ottoman coins found in the territory of the Czech Republic can be seen as a special category. The gold plated forgeries copying gold coins represent the increased contemporary demand for gold, and they are with the highest probability of a local (central European) provenance. The silver plated pieces and copper imitations could be regarded as authentic Ottoman forgeries coming to the mentioned territory, which have accidentally been lost there.
