## ***A countermarked counting jeton from Nürnberg of the 18th century found in Lipník nad Bečvou (Přerov district)***

*In 2009, a countermarked counting jeton was found in the castle park in Lipník nad Bečvou (Přerov district) during archaeological examination led by the museum people from Přerov. It is a product of the Nürnberg master Johann Conrad Höger (mint master since July 21, 1705; died on September 11, 1743) secondarily added with a simple A-shaped countermark on obverse. Such counting jetons changed in their function are relatively rarely preserved rather in the larger collections, and they have not been discovered in the territory of the Czech Republic yet. The specimen from Lipník represents an interesting evidence of the secondary changes in function in the case of some special pieces.*
