Abstract. Type specimens from the collection of Hymenoptera deposited in the Department of Entomology, National Museum of the Czech Republic, are currently being catalogued. In this part of the catalogue we deal with the superfamily Diaprioidea Haliday, 1833. We present precise information about the 46 species belonging to the family Diapriidae Haliday, 1833: four species in the subfamily Ambositrinae Masner, 1961; 34 species in the subfamily Belytiniae Förster, 1856, including 30 holotype specimens, and eight species in the subfamily Diapriinae Haliday, 1833, including four holotype specimens. We also present precise information about one species belonging to the family Maamingidae Early, Masner, Naumann & Be, 2001. In total, 758 type specimens of the superfamily Diaprioidea are deposited in the National Museum of the Czech Republic. Most species belonging to the family Diapriidae were described by Jan Macek. Current status, distribution and photos are provided for each taxon. For many species listed in this catalogue, these are the first-ever published photographs. The holotype and allotype of two species, *Aprestes modesta* Macek, 1997 and *A. rugifrons* Macek, 1997, the holotype of *Aprestes japonica* Macek, 1997, and the allotype of *Aclista pseudobitensis* Macek, 2007 are currently missing but available data on these specimens are provided.

Key words. Hymenoptera, Diaprioidea, Diapriidae, Maamingidae, catalogue, type specimens, National Museum of the Czech Republic

Introduction

The entomological collection of the National Museum of the Czech Republic (NMPC) houses over 8 million specimens, including tens of thousands of primary types. While the majority of these specimens, as well as type material, belong to the order Coleoptera (beetles), the collection encompasses nearly all insect orders to varying extents, including numerous primary types. The Hymenoptera collection, estimated at around 550,000 specimens, represents a smaller but significant part of the collection, with many primary types that are now catalogued in ongoing contributions. The history of the entomological collections in NMPC was previously reviewed by BEZDĚK & HÁJEK (2009), KMENT & KOLÍNOVÁ (2013), TKOČ et al.

(2014), MACHÁČKOVÁ & FIKÁČEK (2014) and MALENOVSKÝ et al. (2016), focusing on Coleoptera, Heteroptera, Diptera, Polyneoptera, and Sternorrhyncha, respectively.

To date, the Hymenoptera families Formicidae and Braconidae have been catalogued in the NMPC (BEZDĚKOVÁ et al. 2017 and HOVORKA & MACEK 2022). In this contribution, we continue this effort by providing a list of types, accompanied by images, for the families Diapriidae and Maamingidae.

Diapriidae predominantly target dipteran larvae (AUSTIN & DOWTON 2000, MASNER & GARCÍA 2002). Characteristic morphological traits in Diapriidae include distinctive wing venation and antennal structure, adaptations that allow them to occupy diverse ecological niches ranging from dense forests to open wetlands. The family Diapriidae plays an essential ecological role by regulating host po-

pulations and maintaining ecological balance. However, their systematics remains complex due to their small size, morphological variability, and the vast number of undescribed species (NAUMANN 1982, JOHNSON 1992, MASNER & GARCÍA 2002 and GADALLAH et al. 2023). Within the NMPC, Diapriidae represents one of the best-represented parasitoid wasp families, with a significant portion of the type material resulting from the extensive work of the museum's former curator, Jan Macek. Throughout his career, Jan Macek made substantial contributions to the systematics of Diaprioidea, describing numerous new species and meticulously curating their type specimens (BENDA et al. 2024).

The family Maamingidae, on the other hand, is a relatively newly established and lesser-known group of parasitoid wasps, delineated only in recent taxonomic studies. Members of this family exhibit unique morphological traits, including distinctive antennal structures and specific wing venation patterns, which set them apart within Diaprioidea. Host associations for Maamingidae remain largely unexplored, making their precise ecological role challenging to ascertain. Despite the limited number of known species, many of which have been described from regions with high biodiversity such as New Zealand and Australia, Maamingidae is increasingly recognized as an intriguing subject for further research due to its distinct evolutionary lineage (EARLY et al. 2001).

By documenting and facilitating access to this type material, the catalogue aims to support taxonomic research and provide a stable foundation for nomenclature within these groups. This effort is anticipated to advance the understanding of parasitoid wasp diversity and the ecological roles these insects play across various ecosystems, furthering both taxonomic clarity and biodiversity conservation (TRIAPITSYN 2014 and ZHANG et al. 2024).

Material and methods

The system used to arrange the taxa mostly follows JOHNSON (1992). Within each subfamily, the genera and species are arranged alphabetically. Each entry includes:

- the name of the taxon in original combination;
- the name of the taxon in original combination and spelling, with the author and year of description, along with pagination, figures, and plates;
- the name-bearing type, number of specimens (including their sex if known) and exact label data. Our remarks are found in square brackets: [p] – preceding data are printed, [hw] – preceding data are handwritten. Separate labels are indicated by a double slash ‘//’ and lines within each label are separated by a slash ‘/’. Unless otherwise indicated, it means black ink and white label;
- the type condition for considerably damaged specimens (given in parentheses following the particular specimen);
- the current taxonomic status;
- known distribution data.

Photographs of type specimens and their labels were taken using an Olympus SZX16 stereomicroscope equipped with an Olympus DP73 built-in camera. Indi-

vidual photographs were stacked using Helicon Focus 8.2.18 software and subsequently edited using Adobe Photoshop. Full reference to each cited publication can be found in the References section.

Catalogue

Family Diapriidae Haliday, 1833

Subfamily Ambositrinae Masner, 1961

Genus *Ambositra* Masner, 1961

Ambositra famosa Masner, 1961 (Fig. 1)

Ambositra famosa Masner, 1961: 294–295, figs 3, 4, 5–11 (original description).

Three paratypes are deposited in NMPC (type collection):

PARATYPE (♀): ‘COLL. MUS. CONGO / Madagascar: Mandraka / II–1944 / A. Seyrig [p] // Ambositra ♀ / famosa n.g. n.sp. / Det. L. Masner, 1958 [hw, pencil] // Paratype [hw, pink label]’ (Fig. 1).

PARATYPE (♀): ‘COLL. MUS. CONGO / Madagascar: Ambositra / II–1944 / A. Seyrig [p] // Ambositra ♀ / famosa n.g. n.sp. / Det. L. Masner, 1958 [hw, pencil] // Paratype [hw, pink label]’.

PARATYPE (♀): ‘Madagascar / Mandraka / A. Seyrig [hw] / II.1944 [hw, vertically written] // Ambositra ♀ / famosa n.g. n.sp. / Det. L. Masner, 1958 [hw, pencil] // Paratype [hw, pink label]’.

Current status. Valid species (JOHNSON 1992, NOTTON 2007 and MADL 2015).

Distribution. Afrotropical, known from the Democratic Republic of the Congo, Madagascar and South Africa (MASNER 1961, JOHNSON 1992, NOTTON 2007 and MADL 2015).

Genus *Betyla* Cameron, 1899

Betyla eupepla Naumann, 1988 (Fig. 2)

Betyla eupepla Naumann, 1988: 61–63, figs M156, M160–161 (original description).

Two paratypes are deposited in NMPC (type collection):

PARATYPE (♀): ‘NEW ZEALAND, [p] NN [hw] / Wakefield [p] / 19.viii.1964 [hw] / J. I. Townsend [p] // litter [p] // ex alcohol / collection [p] // PARATYPE / ♀ Betyla / eupepla / Naumann [p, blue label]’ (Fig. 2).

PARATYPE (♂): ‘NEW ZEALAND, WD / Westland Nat. Pk. / L. Wombat track / 11 Jan 1982 / J.W.Early [p] // 180–240m. ferns / podocarp- / broadleaf forest [p] // PARATYPE [p] / ♂ Betyla / eupepla Naumann [p, blue label] // LINCOLN [p]’.

Current status. Valid species (BERRY 1991).

Distribution. Australasian, known from New Zealand (NAUMANN 1988 and JOHNSON 1992).

Genus *Maoripria* Naumann, 1988

Maoripria verticillata Naumann, 1988 (Fig. 3)

Maoripria verticillata Naumann, 1988: 39–41, figs 41, 189, 190 (original description).

One paratype is deposited in NMPC (type collection):

PARATYPE (♀): ‘NEW ZEALAND AK / Waitakere Ra / Jan 1981, J Noyes [p] // PARATYPE / ♀ Maoripria / verticillata / Nauman [p, blue label]’ (Fig. 3).

Current status. Valid species (JOHNSON 1992).

Distribution. Australasian, known from New Zealand (NAUMANN 1998 and JOHNSON 1992).

Genus *Parabetyla* Brues, 1922

Parabetyla tika Naumann, 1988

(Fig. 4)

Parabetyla tika Naumann, 1988: 46–47, figs 43, 199–200 (original description).

One paratype is deposited in NMPC (type collection):

PARATYPE (♀): ‘NEW ZEALAND, WD / Westland NP / L. Wombat track / 180–240m / 11. i. 1982 [p] // J.W. Early / Swept ferns in / podocarp/broad-leaf forest [p] // ♀ *Parabetyla tika* Naumann [hw] / PARATYPE [p, blue label]’ (Fig. 4).

Current status. Valid species (JOHNSON 1992).

Distribution. Australasian, known from New Zealand (NAUMANN 1998 and JOHNSON 1992).

Subfamily Belytinae Förster, 1856

Genus *Aclista* Förster, 1856

Aclista elegantula Macek, 2006

(Fig. 5)

Aclista elegantula Macek, 2006a: 195–196, figs 6, 13, 20, 27, 34, 41 (original description).

The holotype, allotype and 20 paratypes are deposited in NMPC (type collection):

HOLOTYPE (♀): ‘CZ: Králický Sněžník / Horní Morava (valley) / 24.viii.2001, Macek lgt [p] // *Aclista elegantula* sp.n. / Macek det. 2005 [p] // Holotypus / J.Macek det. [p, red label]’ (Fig. 5).

"19" is overwritten by the next two characters]97[hw, red label]'.

Current status. Valid species (HÜBNER et al. 2024).

Distribution. Western Palearctic, known from Austria, the Czech Republic, Germany, Poland, Slovakia and Sweden (MACEK 1997c and HÜBNER et al. 2024).

Subfamily Diapriinae Haliday, 1833

Genus *Antarctopria* Brues, 1920

Antarctopria coelopae Early, 1978

(Fig. 29)

Antarctopria coelopae Early, 1978: 210–214, figs 1–9 (original description).

Two paratypes are deposited in NMPC (type collection):

PARATYPE (♀): 'Sinkhole / Snares Is., N.Z. / 11 December 1974 / Carol J. Horning [p] // On rocks near / rotting *Durvillea* / high eulittoral [p] // PARATYPE [p] / *Antarctopria coelopae* [hw] / No. [p] Early [hw, yellow label]' (Fig. 29).

PARATYPE (♀): 'Sinkhole / Snares Is., N. Z. / 30 January 1975 / D. S. Horning [p] // On rock wall in / seepage area [p] // PARATYPE [p] / *Antarctopria coelopae* [hw] / No. [p] Early [hw, yellow label]'.

Current status. Valid species as *Spilomicrus coelopae* (Early, 1978) (NOTTON 2014).

Distribution. Australasian, known from the Snares Islands, New Zealand (EARLY 1978).

Genus *Entomacis* Förster, 1856

Entomacis hajeki Macek, 2000

(Fig. 41)

Entomacis hajeki Macek, 2000: 124–125, figs 1, 3 (original description).

The holotype, allotype and five paratypes are deposited in NMPC (type collection):

HOLOTYPE (♀): 'Bohemia cent. / Onen Svět 27 9 / J Macek lgt 93 [p] // Holotypus / J.Macek det.19 [p, red label] // Entomacis / hajeki sp.n. / Macek det., 2000 [p]' (Fig. 41). (Locality label difficult to read and partially erased.)

ALLOTYPE (♂): 'CZ: Orlické hory, res. / Trčkov, 18.vii.-5.viii. / J. Hájek lgt., 1994, FIT [p] // Allotypus / J.Macek det. 19 [p, red label] // Entomacis / hajeki sp.n. / Macek det., 2000 [p]' (Fig. 41).

PARATYPE (♀): 'CZ Železné hory, N. R. / Zlata louka, res. [p] / 26.8.-10.10 [hw] / J. Macek lgt., 1996 [p] // Paratypus / J. Macek [p, red label] // Entomacis / hajeki sp.n. / Macek det., 2000 [p]'.

PARATYPE (♂): 'CZ: Orlické hory, res. / Trčkov, 28.vii.-18.vii. / J. Hájek lgt., 1994, FIT [p] // Entomacis / hajeki sp.n. / Macek det., 2000 [p] // Paratypus / J.Macek det. [p, red label]'.

PARATYPE (♂): 'Austria, Tirol -132- / Zwiesslstein, Lärohen- / wald, 1450m,vor Regen / 27.7.72, leg. FISCHER [p] // Paratypus / J.Macek det. [p, red label] / Entomacis / hajeki sp.n. / Macek det., 2000 [p]'.

PARATYPE (♂): 'Austria, Stmk. -239- / 0,5km S Huben,an / Ache, 1200m 4.7.73 / leg. Fischer [p] // Paratypus / J.Macek det. [p, red label] / Entomacis / hajeki sp.n. / Macek det., 2000 [p]'.

PARATYPE (♂): 'GER: Bavaria, Bayern / Nat.Park. Spiegelau / 17. – 19. vii. 1995, YPT/ M. Barták lgt. [p] / Paratypus / J.Macek det. [p, red label] / Entomacis / hajeki sp.n. / Macek det., 2000 [p]'.

Current status. Valid species (CHEMYREVA 2014).

Distribution. Palaeartic, known from Austria, the Czech Republic, and Russia (MACEK 2000 and CHEMYREVA 2014).

Genus *Galesus* Haliday, 1829

Galesus lapponicus incises Tomšík, 1946

(Fig. 42)

Galesus lapponicus incises Tomšík, 1946: 125, figs in Tab. I.: 5, 6, 13; Tab. II.: 3ab (original description).

The holotype is deposited in NMPC (type collection):

HOLOTYPE (♂): ‘Pod Hoverlou 20 / vii [hw] / Gregor [p] / 37 [hw] // 5 [hw, pencil, round label] // TYPUS [p, red label] // G. lapponicus / incises m. [hw, red ink] / Det.B.Tomšík [p]’ (Fig. 42).

Current status. Junior synonym of *Psilus lapponicus* (Thomson, 1859) (JOHNSON 1992).

Distribution. Palaearctic, known from Austria, the Czech Republic, Finland, Scotland, Sweden, and Ukraine (KIEFFER 1916, TOMŠÍK 1946 and SLU ARTDATABANKEN 2024).

Genus *Idiota* Förster, 1856

Idiota mariae Gregor, 1939

(Fig. 43)

Idiota mariae and *I. marii* Gregor, 1939: 133–135, fig. 2 (original description).

The holotype is deposited in NMPC (type collection):

HOLOTYPE (♀): ‘Kelč [p] 6.viii [hw] / Gregor [p] 37 [hw] // Idiota [p] / mariae Gregor [hw] / Macek, det. [p], 1998 [hw] // TYPUS [p, red label in black frame]’ (Fig. 43).

Current status. Valid species (CHEMYREVA et al. 2021). Duplicate original spellings *I. marii* and *I. mariae* were resolved by CHEMYREVA et al. (2021) by fixation of *I. mariae* Gregor, 1939 as the correct original spelling.

Distribution. Palaearctic, known from the Czech Republic, Denmark, Finland, France, Germany, Japan, Mongolia, Russia, Sweden, and United Kingdom (GREGOR 1939, CHEMYREVA et al. 2021 and VIKBERG 2022).

Genus *Oxypria* Kieffer, 1908

Oxypria bouceki Masner, 1959

(Fig. 44)

Oxypria bouceki Masner, 1959: 90–91, figs 1, 2 (original description).

The holotype is deposited in NMPC (type collection):

HOLOTYPE (♂): ‘Slovakia or. / Slanec 4.viii.54 / Bouček lgt. [hw] // Holotypus [hw, red label] // Oxypria ♂ / bouček sp.n. [hw] / L. Masner det., 19[p]58[hw]’ (Fig. 44).

Current status. Valid as *Trichopria bouceki* (Masner, 1959) (NOTTON 2014).

Distribution. Palaearctic, known from Slovakia (MASNER 1959).

Genus *Spilomicrus* Westwood, 1832

Spilomicrus formosus Jansson, 1942

(Fig. 45)

Spilomicrus formosus Jansson, 1942: 215–216 (original description).

One paratype is deposited in NMPC (type collection):

PARATYPE (♂): ‘Ör. Oset / 31/7 42 A. J. [hw] // Paratypus [p, red label in black frame] // Spilomicrus / formosus Janss. ♂ [hw] // Spilomicrus / formosus [hw, pencil, red label]’ (Fig. 45).

Current status. Valid species (HÜBNER & CHEMYREVA 2024).

Distribution. Holarctic, known from Belgium, the Czech Republic, Denmark, Finland, Germany, Great Britain, Ireland, Japan, Norway, Russia, Slovakia, Sweden, Canada, the United States (HÜBNER & CHEMYREVA 2024).

Genus *Viennopria* Jansson, 1953

Viennopria priesneri Jansson, 1953

(Fig. 46)

Viennopria priesneri Jansson, 1953: 105–106, fig. 1 (original description).

One paratype is deposited in NMPC (type collection):

PARATYPE (♀): ‘Lu. Uppl. / Ösby / Lindroth [hw] // I.18/8 / -41 [hw, pencil] / Paratypus [p, red label in black frame] / Viennopria / priesneri Jansson ♀ [hw, pencil]’ (Fig. 46).

Current status. Valid species (MUESEBECK & WALKLEY 1956, MASNER 1957, JOHNSON 1992, NOTTON 1995).

Distribution. Palaearctic, known from Austria, the Czech Republic and Sweden (JANSSON 1953, MASNER 1957).

Family Maamingidae Early, Masner, Naumann & Austin, 2001

Genus Maaminga Early, Masner, Naumann & Austin, 2001

Maaminga rangi Early, Masner, Naumann & Austin, 2001

(Fig. 47)

Maaminga rangi Early, Masner, Naumann & Austin, 2001: 345–346, figs 1–4, 14, 20 (original description).

Two paratypes are deposited in NMPC (type collection):

PARATYPE (♀): ‘NZ (ND): Waipoura For. / 6-10.II.1995. 100m / Yellow PT in broad / leaf for. L. LeSage [p] // PARATYPE, CNCI / *Maaminga rangi* ♀ / Early et al., 2001 [p, yellow label]’ (Fig. 47).

PARATYPE (♂): ‘NZ (ND): Waipoura For. / 6-10.ii.1995. 100m / Yellow PT in broad / leaf for. L. LeSage [p] // PARATYPE, CNCI / *Maaminga rangi* ♂ / Early et al., 2001 [p, yellow label]’.

Current status. Valid species (EARLY et al. 2001).

Distribution. Australasian, known from New Zealand (EARLY et al. 2001).

Missing types

The type specimens listed below should be deposited in the NMPC collection but are currently missing, likely due to unreturned loans. Unfortunately, records of these loans are also missing.

Subfamily Belytinae Förster, 1856

Genus Aclista Förster, 1856

Aclista pseudobitensis Macek, 2007

Aclista pseudobitensis Macek, 2007: 219–220, figs 5, 13, 21, 29, 33 (original description).

The allotype is missing from NMPC (type collection):

ALLOTYPUS (♂): ‘CZ: C Bohemia, Praha-Radotín (6052), 3.vii.1985, J. Macek lgt. et det.’.

Genus *Aprestes* Nixon, 1957

Aprestes japonica Macek, 1997

Aprestes japonica Macek, 1997: 42–43, figs 4, 7, 8 (original description).

The holotype is missing from NMPC (type collection):

HOLOTYPE (♀): ‘Honshu, Iwate, Iwaizumi Ritauri, 800m, 11.-17.viii. 1991, Smetana lgt., female’.

Aprestes modesta Macek, 1997

Aprestes modesta Macek, 1997: 43, fig. 5 (original description).

The holotype and allotype are missing from NMPC (type collection):

HOLOTYPE (♀): ‘USA: Maine, York Co., West Lebanon, 7.-14.v.1990, FIT, D. Wharry’.

ALLOTYPE (♂): ‘USA: Maine, York Co., West Lebanon, 7.-14.v.1990, FIT, D. Wharry’.

Aprestes rugifrons Macek, 1997

Aprestes rugifrons Macek, 1997: 41–42, figs 2, 6 (original description).

The holotype and allotype are missing from NMPC (type collection):

HOLOTYPE (♀): ‘JAPAN: Aichi, 900m, Shitara, Uradani, 20.-26.vi.1994, YPT, Yamagishi lgt.’.

ALLOTYPE (♂): ‘JAPAN: Aichi, 900m, Shitara, Uradani, 17.-23.x.1994, YPT, Yamagishi lgt.’.

Acknowledgements

The work was supported by the Ministry of Culture of the Czech Republic (IP DRKVO 2024–2028/5.I.a, 00023272). We also extend our gratitude to Elijah Talamas (Florida State Collection of Arthropods) and Jessica Awad (Florida Museum of Natural History) for their thorough reviews, as well as to Petr Kment (NMPC) for the final proofreading.
